

Access CORRECTION

In a recent Access tip, we told you how to stamp a record with the current date and/or time whenever a change is made ("Stamp audit trails," August 28, 2002). The fourth step contained a punctuation error in the code. The original step said:

```
"The code builder will enter the line:  
Private Sub Form_BeforeUpdate(Cancel As Integer)  
Me![Recupdated] = Now."  
"End Sub".
```

Here's the correct code:

```
Private Sub Form_BeforeUpdate(Cancel As Integer)  
Me![Recupdated] = Now  
End Sub
```

We apologize for any confusion this may have caused.
