Dreamweaver 8 Project 2 - True/False

Instructions: Circle T if the statement is true or F if the statement is false.

T   F   1. A home page is normally named index.htm or index.html.

T   F   2. When you start Dreamweaver, most or all the windows are closed by
              default.

T   F   3. The size and type of images used within a Web page have no effect on how
              fast the Web page displays in the viewer's Web browser.

T   F   4. The GIF format uses 8-bit resolution, and supports up to 256 colors.

T   F   5. The Flash panel, which is grouped with the Files panel, helps you manage
              and organize your Web site's assets.

T   F   6. The Property inspector lets you see the current properties of the selected
              element.

T   F   7. The Property Inspector Link box allows you to make the selected image a
              hyperlink to a specified URL or Web page.

T   F   8. The processing of cropping an image adds or subtracts pixels from a resized
              file and adjusts the focus somewhat.

T   F   9. A named anchor lets the user link to a specific location within a document.

T   F   10. Dreamweaver provides two views to look at a document: Design view and
               Code view.
