Dreamweaver 8 Project 3 - True/False

Instructions: Circle T if the statement is true or F if the statement is false.

- T F 1. Dreamweaver's table feature is very similar to the table feature in word processing programs like Microsoft Word.
- T F 2. In Standard mode, you can draw, resize, and move boxes on the page while Dreamweaver still uses tables for the underlying structure.
- T F 3. Tables are only used to hold data.
- T F 4. You use the Property inspector to modify and add table attributes.
- T F 5. When a property is set to one value for the whole table and another value for an individual cell, row formatting takes precedence over cell formatting.
- T F 6. When changing cell alignment, the Baseline option aligns the cell content to the bottom of the page.
- T F 7. You can press the TAB key to move from cell to cell.
- T F 8. To resize a row, select the row and then drag the lower border of the row.
- T F 9. When a table is created within Dreamweaver, the default border is set to 1, or bold.
- T F 10. To delete a layout cell, click the edge of the cell to select it, and then press the DELETE key.
