Dreamweaver 8 Project 4 - True/False

Instructions: Circle T if the statement is true or F if the statement is false.

- T F 1. An HTML document may contain multiple forms, but you cannot nest forms.
- T F 2. A common way to process form data is through a Common Gateway Interface script.
- T F 3. To insert a form, position that insertion point where you want the form to start and then click the Form button on the Forms category Insert bar.
- T F 4. The Action text box of the Property Inspector contains the mailto address or specifies the URL to the dynamic page or script that will process the form.
- T F 5. In Dreamweaver, a form must have a name to work.
- T F 6. A menu provides a scroll bar with up and down arrows that lets a user scroll the list.
- T F 7. The textarea form object supports multiline objects.
- T F 8. The Submit button on a form will process a script and clear the form.
- T F 9. To add a label, select the form object and then double click the Add/Insert button.
- T F 10. When you are adding multiple radio buttons to a form, the Radio Group form object is the fastest and easiest method to use.
