Dreamweaver 8 Project 5 - True/False

Instructions: Circle T if the statement is true or F if the statement is false.

T   F   1. A wizard is a pre-designed Web page that you can use to quickly and easily make more Web pages.

T   F   2. A Dreamweaver template is a special type of HTML document.

T   F   3. The sections of a page in which you can make changes are called modifiable tag field areas.

T   F   4. You can define an individual cell or an entire table as an editable region.

T   F   5. When you detach a page from a template, the page becomes a regular document, and locked regions become editable.

T   F   6. Internal styling sheets are separate files and exist independently of any HTML pages within the Web site.

T   F   7. To develop a style sheet, you start with the CSS Styles panel.

T   F   8. You add style attributes to a style sheet through the Properties panel dialog box.

T   F   9. The check boxes within the Decoration attribute in the CCS Style Definition dialog box provide options to add an underline, a line through text, or to make text blink.

T   F   10. To remove a style from an element on a Web page, select the element and then click the Delete CSS Style button in the CSS Styles panel.
