Dreamweaver 8 Project 6 - True/False

Instructions: Circle T if the statement is true or F if the statement is false.

T   F   1. A layer can be placed in an exact spot anywhere on the page with pixel-
                perfect precision.

T   F   2. A big advantage of using layers is that older browsers support them.

T   F   3. Dynamic HTML is an extension of HTML that gives Web page developers
                the capability of precisely positioning objects on the Web page.

T   F   4. On the Layer Property inspector, CLIP assigns a unique name to identify the
                layer.

T   F   5. A nested layer is also called a child layer.

T   F   6. Static positioning in the only type of layer positioning that Dreamweaver
                can use.

T   F   7. Two types of image maps exist: server-side and client-side.

T   F   8. To define a hotspot, you can use one of three shapes: a rectangle, a circle (or
                oval), or a polygon.

T   F   9. You control the absolute positioning of layers on a Web page by setting five
                attributes: Left, Top, Width, Height, and Z-Index.

T   F   10. To resize a layer one pixel at a time, hold down the SHIFT key while
                 pressing an arrow key.
