## Dreamweaver 8 Project 8 True/False

Instructions: Circle T if the statement is true or F if the statement is false.

- T F 1. The default speed for animation is 15 feet per second.
- T F 2. Animation is created by dragging an image, because Dreamweaver automatically records the path and timing.
- T F 3. The Web site developer can use the Timelines panel to create animation.
- T F 4. The Animation channel contains the bars for animating layers and images.
- T F 5. You can play a timeline backward by clicking the Back button and holding down the mouse button.
- T F 6. The Rewind button moves the playback head back one frame in the timeline.
- T F 7. You speed up animation by increasing the length of the animation bar.
- T F 8. Animations do not have to start at the beginning of a timeline.
- T F 9. You can copy and paste animation into another area of the current timeline, or into another timeline.
- T F 10. Behaviors cannot be used to pause and stop a timeline.
