The year 2019 represents 156 years and seven generations of the Dadant Family serving beekeepers both domestically and worldwide. Since our start in 1863 the Dadant family has prided themselves in providing quality beekeeping supplies to beekeepers of all sizes. With 11 storefront locations and three manufacturing plants across the country, Dadant is here for your bee supply needs.

With 156 years behind us we have no intention of going anywhere. While others in the industry are being bought out by investment groups the folks at Dadant are still family owned and still going strong. With the newest addition to our team being the 7th generation of the Dadant family we plan to be here for years to come.

As our cover states, we have been busy remodeling our stainless steel extracting line. From new legs on each unit to the redesign of the inner reels, your honey extracting has never been easier. The Dadant line of SS equipment is made in the USA at our manufacturing facility in Dallas City IL. Here we are able to keep a close eye on all production and quality control. Can other suppliers say the same?

Our 100% Beeswax foundation is produced in Hamilton IL at our corporate office where it has been manufactured since our humble beginnings in 1863. This foundation is milled to three distinct cell sizes. 5.4 or standard cell size, 5.1 transitional size and 4.9 small cell. We manufacture all types of wax foundation and have the ability to do special size runs for those after something not stocked. Our wax foundation offerings include wired, medium brood, cut comb, and thin surplus. See inside our catalog for further information and wax working rates on page 16.

Our woodenware is produced in Polson MT at our woodenware manufacturing facility. From full truck load quantities down to a single hive, Dadant has your woodenware needs covered. Our bee boxes are cut from Ponderosa Pine and are known to outlast the competition's boxes year after year.

We once again are offering free shipping on qualifying orders over 100 dollars. Items exempt are marked for your convenience. When speedier delivery is needed we offer next day, 2nd day, and 3 day shipping at the customers expense. Page 139 lists our shipping restrictions.

Online ordering has never been easier. Go to www.dadant.com to place your bee supply order via the web. Online at our webpage you will find the most up-to-date news within the industry, how-to videos, and other pertinent information. See us on Facebook or Twitter and stay in the loop with the American Bee Journal, our monthly publication which is available both digitally and via paper copy.

We look forward to what the 2019 year has in store for us, and hope to be your go-to source in the beekeeping industry. From pollinators to honey producers and packers, we have the supplies to cover all your beekeeping needs. Dealer inquiries welcome.

From all of us at Dadant, we wish you a great 2019 beekeeping season.
Tim, Nick, Gabe, and Matt

 *Dadant*

ME? BEEKEEPING!

Man's Love Affair with the Honey Bee

Even before recorded history, man was gathering honey from honey bees living in hollow trees. But honey wasn't the only reason for keeping honey bees because man soon learned that the honey bee was an interesting and exciting social insect. The mystery and fascination of the hive, how honey bees live, work and reproduce has intrigued man ever since.

Beekeeping as a Hobby or Vocation

Dadant and Sons has been supplying the beekeeping industry with supplies and equipment since 1863. In that time we have developed equipment that makes beekeeping easy and fun, even for the inexperienced beginner.

Hundreds of thousands of people in all walks of life have become enthusiastic beekeepers. Whether it is in your own backyard, apartment, rooftop, small town garden or farm, beekeeping can fit in anywhere.

The Honey Bee Colony

The story behind what appears to be the casual movement of honey bees from flower to flower is the discovery of an industrious and tireless society. Honey bees are social insects. They band together and divide labor. The honey bee society is made up of three types of individuals with sharply defined duties and functions. The population of the colony numbers from about 7,000 in mid winter to over 70,000 in late summer and consists of one Queen, several hundred Drones and thousands of Workers.

How Honey Bees Work

Most all flowers produce a sweet liquid to attract insects, primarily honey bees, so that pollination can take place and assure the survival of that plant species. Honey bees make honey from nectar found inside the flower blossom. Field worker honey bees collect the nectar and carry it back to the hive in pouches within their body. The field worker honey bee gives the nectar to young worker honey bees back in the hive, who then place the nectar in a beeswax comb made up of six sided cells. The excess water is then evaporated from the nectar. After a period of time the nectar is transformed into pure honey.

Some workers collect nectar, some collect pollen and some do both. In terms of economic value the workers that collect pollen are the most important to you and I. Honey is just the sweet, secondary reward that we collect from honey bees. If honey bees ceased to exist today, about one-third (1/3) of all foods we eat would disappear. Why? Because of pollination. The worker that collects pollen from the flowers packs it into pellets on her hind legs. As she travels from flower to flower, the pollen brushes off onto a special pollen receiving structure called the stigma in the center of the flower. This process is called pollination and allows all flowering crops to reproduce. The outcome is fruit, vegetables, nuts and a wide variety of seeds that are used for human and animal foods. For this reason many people keep bees on farms and near gardens.

The Worker

The female worker honey bee is the laborer of the colony. Workers gather all the nectar and pollen, feed young larvae, warm and protect eggs, larvae and pupae, supply water, secrete beeswax, build comb and do many other tasks.

The worker starts as a fertilized egg, which hatches into a larva. The larva grows, matures and soon changes into the next form called a pupa. The pupa then matures into an adult worker honey bee. The entire metamorphosis takes only 21 days.

During the summer honey flow, June through August, worker honey bees travel about 55,000 miles to gather enough nectar to produce one pound of honey. Each individual worker will only produce about 1/12 of a teaspoon of honey and about 1/80 of a teaspoon of beeswax. However, an entire colony can produce 200 lbs of honey annually!

The Queen

Honey bee colony life revolves around the queen honey bee. Without the eggs that she lays the entire colony would die. She begins life as an ordinary female worker larva, but by feeding on an extremely rich mixture of food, provided by young worker honey bees called Royal Jelly, she becomes a queen. A new queen can be produced at any time, if the young workers choose, by feeding any female larvae less than 48 hours old royal jelly.

The queen's function is to lay eggs. Day after day the queen lays thousands of eggs which will develop into more honey bees. She is continually surrounded, protected and fed by young worker honey bees.

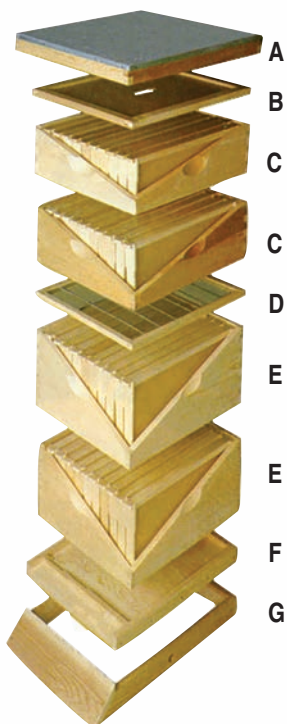

The Drone

The drone is the male honey bee. He is larger than the worker and smaller than the queen.

Except for mating, the drone is an expendable member of the colony. Drones do not collect nectar or pollen nor do they make beeswax. In fact, they are driven from the colony as winter approaches where they perish from cold and starvation.

BEEHIVE COMPONENTS

The modern beehive is like a highly efficient multi-storied factory with each “story” having a specific function. These “stories” work together to provide a home for bees and a honey factory for the beekeeper.

A) Hive Cover - Telescoping cover “telescopes” over the sides of the top super to protect the hive. Galvanized covering.

B) Inner Cover - Creates a dead air space for insulation from heat and cold.

C) Shallow Supers - For “surplus” honey storage. Bees store their extra honey in these for the beekeeper to take. 6 5/8”, 5 1/4” supers or even hive bodies may be used.

D) Queen Excluder - Keeps the queen bee in the brood chambers as she is too large to pass through the excluder. Prevents her from laying eggs and raising brood in honey supers placed above the excluder.

E) Hive Bodies - “Brood Chambers” are the bees’ living quarters. The queen lays eggs in these chambers and brood is raised. Honey and pollen is also stored for the bees’ food.

F) Bottom Board - Forms the floor of the hive. Shown with wooden entrance reducer in place to keep mice and some cold out during winter.

G) Hive Stand - Supports the hive off the ground to keep hive bottom dry and insulate hive.

Successful beekeeping means easy manipulation of the frames of brood and honey to provide a “surplus” of honey beyond that needed by the bees to live on and rear their replacements. It is this “surplus” that the beekeeper removes and markets.

BEEKEEPING EQUIPMENT

The Frame

The modern hive for the honey bee as provided by *Dadant and Sons* is the perfect home for your honey bees and makes beekeeping remarkably simple and enjoyable. The hive is constructed to hold movable frames which in turn hold pure beeswax foundation (starter sheets for honeycomb). These frames hold the honeycomb that the honey bees make. The honeycomb provides storage space for honey and new bees develop in its individual six sided cells.

The Hive Tool

Honey bees collect a miscellaneous product called propolis from tree gums, saps and resins—anything sticky. This they use to seal cracks and crevices within the hive. Because of the sticky nature of this product a special tool is used for those times when a little leverage is necessary to remove frames, supers, etc. from the hive.

The Hive Body (brood chamber)

These large boxes containing ten (10) frames are the heart of the honey bee colony. Usually two hive bodies are used year round for the honey bees to use as an area to raise brood (larva and pupa) and to store extra food for themselves for use during winter when no nectar is available.

The Super

Additional boxes, usually smaller than the hive bodies, with movable frames are set on top of the brood chamber and provide space for the honey bee to store surplus honey which the beekeeper will harvest. The word Super comes from the word Superimpose which means, “to place in a covering position, to overlay.”

The Smoker

The smoker is a metal container with air pumping bellows attached. A smoldering fire is built in the metal fire chamber and the bellows are used to blow the smoke produced out through a nozzle at the top of the smoker.

When lightly puffed into a colony of honey bees the smoke causes a temporary confusion and disorganization within the colony. The honey bee’s group defensive behavior is disrupted. This allows the beekeeper to move calmly and to comfortably inspect the interior of their colonies.

The Bee Veil

The bee veil protects the face and neck. Many times it is made from wire mesh to help the veil stand away from the face.

The Gloves

There are a variety of types and styles of gloves available from *Dadant & Sons*. Gloves provide the beekeeper with protection when working the honey bee colony.

FREQUENTLY ASKED QUESTIONS ABOUT BEEKEEPING

When do I order package bees?

It is best to order package bees at the beginning or very early in the year for spring delivery. The bees should be delivered after the date of the last hard freeze for your region. The package honey bee suppliers will be able to help you determine the best delivery date.

When should I hive my new package of honey bees?

The best time to hive the honey bees is late afternoon or early evening. Spray the honey bees with sugar water while still in the shipping container. This will make it easier to put the honey bees in the hive.

What kind of frames should I use when starting with package bees?

It is best not to mix solid plastic frames with wood frames when hiving package bees. It is confusing to the bees when mixed. We recommend using wood frames when hiving package bees.

What do I feed the honey bees in the spring?

It is best to feed a mixture of sugar and water in a one to one ratio. The bees will use the sugar syrup mixture until natural sources are available. In the fall, use a two part sugar to one part water mixture if the bees do not have adequate winter stores. Feeders on pages 61 & 62 work well. You can also stimulate the honey bees to raise brood by feeding them Dadant's Brood Builder Patties or AP23® Patties. These items can be found on pages 67 - 68.

Where do I place my hive?

If you are in the city, you should put the entrance of the hive facing a high fence. This will force the bees to fly in a high flight pattern, avoiding neighbors. It is good to give the hives a wind break to protect them. You can also place the entrance facing the sun to allow the bees an early start in the morning. The hive can also be placed on a hive stand, concrete blocks or a wooden pallet to keep it off of the ground.

Do I paint the inside of the beehive?

No, paint the outside of the beehive only. Allow the paint to dry thoroughly before installing the bees.

How often should I check my new hive?

You can open the hive after a few days to see if the queen has been released. Look in the Queen Cage to see if the Queen has been released. If the Queen has been released, you should check for eggs and larvae to be sure she is active. If the Queen has not been released, enlarge the hole in the candy in the Queen Cage. Three weeks after you have hived the package, you can examine the colony again. Be sure to keep feeding the colony sugar syrup during this time to stimulate comb building. You should see sealed brood in the colony at this time.

Can I keep bees in a straw skep?

No, honey bees are required to be kept in a beehive with removable frames. This is to allow inspection for diseases. It is the law in all states.

When should I add a second hive body or super?

You should add the second hive body or super when the majority of the frames in the first hive body are fully drawn out, (8 or 9 frames). A second super should be added after the first super is about one half full.

How much honey should I leave on the hive to overwinter?

As a general rule, you should have a full super or second hive body and 20 to 30 pounds of honey in the brood nest. This will amount to a total of 60 to 70 pounds of honey for winter and early spring consumption.

What should I look for in spring in the colony?

You should check for evidence that the Queen is laying eggs. You should also check the honey stores and pollen supply. If the honey stores are low, you may start feeding sugar syrup in a one to one ratio of sugar and water. The bees may consume about 10 pounds of sugar syrup in a one-week period.

How can I get information or help about beekeeping in my area?

All 50 states have state and local associations and are a very good source of information and help. They will be able to direct you to a bee club or an association in your area. For contact information on the state associations call us at 1-888-922-1293 or visit <http://americanbeejournal.com/tiposlinks/beekeeping-associations/>.

*THE HONEY BEE IS THE ONLY INSECT
THAT PRODUCES FOOD EATEN BY MAN.*

Attention: Dadant Package Bee Customers for Pick-up only at Dadant Branches

At the selected Dadant offices listed, bees will be available for pick-up. For details of day, time, location and cost, call your nearest Dadant Branch Location. (Most pickup days are mid-April.)

- Hamilton, IL** 1-888-922-1293
- Watertown, WI** 1-920-261-5363
- Albion, MI (Pkgs & Nuc)** 1-877-932-3268
- Waverly, NY** 1-877-532-3268
- Chatham, VA** 1-800-220-8325
- Frankfort, KY (Pkgs & Nuc)** 1-888-932-3268
- High Springs, FL (Nucs & Hives)** 1-877-832-3268

Package bees will be in limited quantities. CALL EARLY TO RESERVE BEES.
Delivery dates are subject to change due to weather conditions.

Some branch locations supply package bees independently of Dadant & Sons, Inc. Purchase of bees & queens at these locations are not the responsibility of Dadant & Sons, Inc.

Call or email for a list of package bee suppliers for your territory.
1-888-922-1293 or email: dadant@dadant.com

B-Funnel

The B-Funnel is designed to reduce stress and save time and effort when installing package bees. Made of corrugated plastic, it is very easy to put together and use. A velcro strap holds it securely against the hive. The beekeeper then positions the bee cage on top of the funnel. The B-Funnel channels the bees directly into the hive, reducing the number of bees in the air. It assists the bees in finding their new home, is less stressful for the bees, and can be removed as soon as the bees have left the package box.

M01985 B-Funnel, Ship wt. 1 lb. \$11.95

Suggestions for Hiving Your Package Bees

1 To keep bees from flying we suggest spraying them down with sugar syrup.

2 Jar package on ground to knock bees to the bottom of package.

3 Remove syrup can and queen cage. Cover hole in package with piece of cardboard or feed can.

4 Place queen between top bars with the candy end up. Use a wire or nail to hold in place.

5 Shake 2-3 cups worth of bees directly on top of queen and remaining bees in frame slots 5, 6, 7.

6 Gently place frames back into hive and cover being careful not to crush the bees.

7 Reduce entrance to keep bees from absconding.

8 Feed, feed, feed. Feed until first real honey flow or bees stop taking syrup.

9 Check back in 4-5 days after installing to be sure your queen is released.

Hive top feeders may be used. Division board feeders are not recommended for use with package bees.

***** It is essential that you keep feed on the bees until they have an abundance of nectar available.*****

ESSENTIALS OF BEEKEEPING—BEGINNER KITS

Beginner's Kit #1

Beginner Kit No. 1 contains everything necessary for the beginner to start that first colony of bees except the bees themselves. Unassembled kit with the best grade wood. As your colony grows, we recommend the Hobby Kit #3 for the additional items needed for production of a honey crop. Ship wt. 39 lbs.

- 1 - standard beehive
- 10 - 9 1/2" grooved top bar frames
- 10 - sheets plastic based foundation
- 1 - bottom board
- 1 - inner cover
- 1 - telescoping metal cover
- 1 - reversible entrance reducer
- 1 - entrance feeder
- 1 - all purpose hive tool
- 1 - bee smoker to calm bees
- 1 - smoker fuel 1 lb.
- 1 - Hat Veil Pullover Combo
- 1 - sting resistant gloves - large
- 1 - book *First Lessons in Beekeeping*

QUALITY WOODENWARE— A DADANT MANUFACTURING SPECIALTY

Hive Bodies And Honey Supers

*Dadant Construction . . .
Small Details Make A Big Difference*

PONDEROSA PINE WOOD PRODUCTS

Our woodenware is manufactured from hand selected Ponderosa Pine. Each board has been carefully moisture-metered to assure its proper moisture content before it is precision-milled into the finished product. All our hive bodies and supers have “pre-drilled” holes for nails to prevent splitting during assembly.

- **HANDHOLDS**
tapered cut for easy gripping
- **MOISTURE METERING**
before cutting to prevent warping
- **UNIFORM INTERLOCKING JOINTS**
to prevent cracking
- **PONDEROSA PINE**
from the Northwest. The best wood for the job.
- **UNIFORM FRAME RESTS**
provides the proper “Bee Space”
- **PRE-DRILLED NAIL HOLES**
to prevent splitting
- **INTERLOCKING CONSTRUCTION**
for superior strength

3 Basic Grades

Select

A grade that is truly “selected” which allows only very small tight knots and no deviations in the joints, rabbets, or handholds.

Commercial

The most widely used by commercial beekeepers. Tight knots are allowed where they occur except in the joint and rabbet.

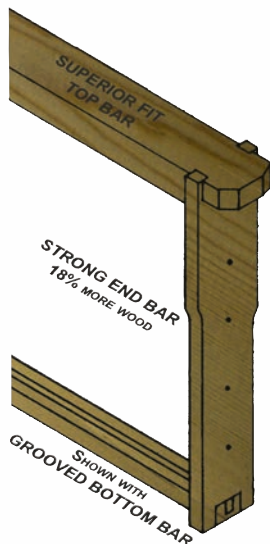

Economy

The same precise fit as the other two grades but is a lower wood quality. Does not pass quality standards for “select” or “commercial” but is a good serviceable box. Layer knots and knots with cracks or splits are allowed.

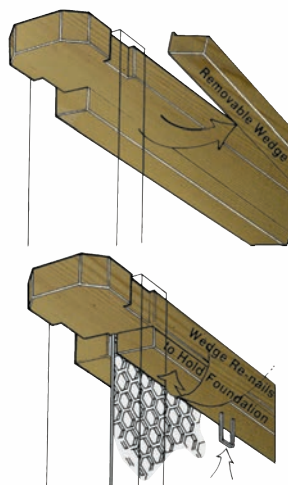

We will strive to maintain woodenware prices; however, due to escalating lumber costs, wood price increases may be necessary.

DADANT QUALITY FRAMES

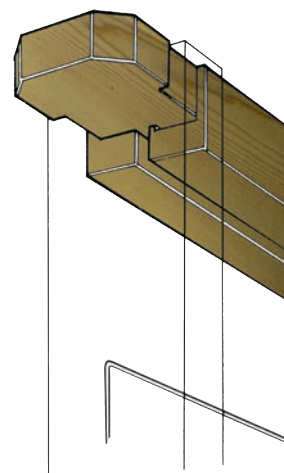

Dadant Frame Construction

- 18% more wood in end bars (Full 3/8" thickness)
- Grooved bottom bar stronger and easier to use

Wedge Top Bar

- 1) Wood wedge is removed from frame.
- 2) Foundation is placed in frame.
- 3) Wood wedge is held firmly against foundation and nailed or stapled in place.

Grooved Top Bar

Foundation is placed in bottom-bar groove and top-bar groove. This frame works best with a rigid foundation such as Plasticell.

—2 Frame Styles—

NOTE: Unless otherwise specified, frames with grooved bottom bars will be shipped. SOLID AND SLOTTED BOTTOM BARS ARE AVAILABLE IN 100 OR MORE QUANTITIES. Please specify bottom bar desired.

DADANT FOUNDATION — The Key To Successful Beekeeping

Fresh Quality Foundation Makes Good Productive Combs

F60006	Cut Comb	3.58	\$3.53
Call for pricing on Small Cell Wired or Medium Plain			
Note: Add \$.03 per pound to figures shown for all shallow sizes (4 3/4" and below).			
Please Note: Working rates for Thin Surplus and Cut Comb Foundations are based on customers providing light wax. Additional upcharges will apply if light wax is not supplied.			

All prices are for 25 lb. bulk packs. Additional charges will be assessed for less than 25 lb. per carton packaging. (i.e. 10 and 50 sheet packs and 1 lb. and 5 lb. single packs) — (Special sizes—200# Wax Working Minimum or Additional \$110 set-up charge applies. Small Cell orders under 200# will have a \$300.00 set up fee.)

The Dadant Company has been working wax into foundation for their customers for many years. Our wax working rates include all the many steps it takes to process your wax into the finest 100% beeswax foundation available. Careful inspection during every step of the manufacturing process, along with durable and protective packaging, insures a final product of superior quality.

Because of the low prices reflected in the working rates, we must have your beeswax before shipping foundation and do require payment for the working charge. Beeswax foundations cannot be shipped safely in cold weather. For further information on the wax working program, contact your local branch manager.

ASSEMBLED FRAMES

STRENGTH where it counts!

Our assembled frames continue to feature a full 1/2" thick bottom bar along with a full 3/4" thick top bar.

FOUNDATION FOR VARROA CONTROL

One piece drone frames come beeswax coated and are available in 9 1/8" and 6 1/4" depths. Comes in neon green color to help you easily identify drone combs. Ship wt. 1 lb. ea

The **Varroa Mite** is, without a doubt, the most serious parasite of honey bees in North America. Ignoring treatment of colonies infested with Varroa mites will result in colony death in 1 to 2 years. Most honey bee colonies in North America are infested with Varroa mites.

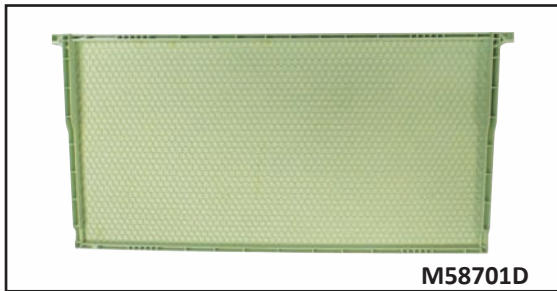

Varroa Mite on Honey Bee

M58725D

6 1/4" Drone Comb

M58725D 6 1/4 coated drone comb
1-10 \$3.50

M58701D

9 1/8" Drone Comb

M58701D 9 1/8 coated drone comb
1-10 \$3.50

Drone Cell Foundation

By using a few frames of drone comb, you can lure Varroa mites to the developing drone brood, and the mites become trapped within the drone cell when the bees cap the cells. Remove the frame of capped drone cells. Put it in a plastic bag in your freezer overnight to kill the mites. Remove from the freezer and let warm. With the cappings scratcher on page 82, break open the drone cells. Then, put the frame back into the colony and allow the worker bees to clean out the cells, getting rid of the dead varroa mites and drones. After the queen lays drone eggs in these cells again, this Varroa trapping cycle is repeated.

Varroa Mite

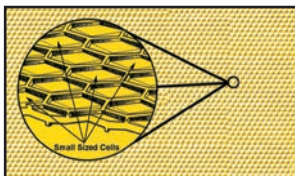

Actual Size

- F45010** 8 1/2 x 16 3/4 Medium Brood Drone Comb Foundation
10 Sheets Per Package, Ship wt. 2 lbs. ea. \$18.00
- F45050** 50 sheet Medium Brood Drone Comb Foundation
Ship wt. 9 lbs. ea. \$80.00
- F45000** 20 lb. Medium Brood Drone Comb Foundation
Ship wt. 28 lbs. (Approx. 7 sheets per lb.) ea. \$235.00

Dadant Small Cell Beeswax Foundation 4.9 & 5.1

It is a fact that varroa mites have a difficult time reproducing on worker brood raised in small cell comb. So, if you are an experienced beekeeper who has an experimental nature, this may be an opportunity for you to move ahead of the chemical control crowd with your honey bee management.

WHY A 5.1?

Many recommend a transition from the standard 5.4 to the 4.9 cell foundation allowing the bees to adjust more readily and help avoid the erratic comb drawing that can occur with a direct downsizing from the 5.4 to the 4.9—thus a middle step with the 5.1

NAILS, RABBETS & SUPPORT PINS

Plastic Support Pins

Slip the pin in the holes on the end bar and slide the sheet of foundation in to securely hold it in place. Minimum of two per end bar. C/100

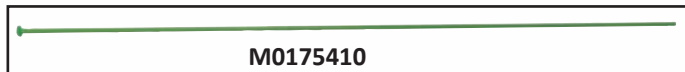

M01755 c/100 pins, Ship wt. 1 lb \$10.95

Plastic Rods

Support Rods – Sick of cross wiring frames? These support rods slide through the holes in the end bars and are locked in place. Wire your frames in seconds. Ship wt. 1 lb

M0175410 c/10 rods \$4.95

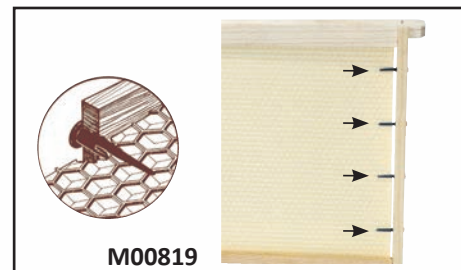

Support Pins

Support pins are small metal pins similar to clothespins. Simply press these pins through the holes in the frame end bars so foundation is held in pin slot. For many, especially beginning beekeepers using crimp wired foundation in brood chambers, support pins are much easier to use than the sometimes tedious cross wiring to prevent foundation sagging. **Cannot be used with Plasticell foundation.**

M00819 200 pins, Ship wt. 1 lb. \$16.50

M00820 1000 pins, Ship wt. 4 lbs. \$72.45

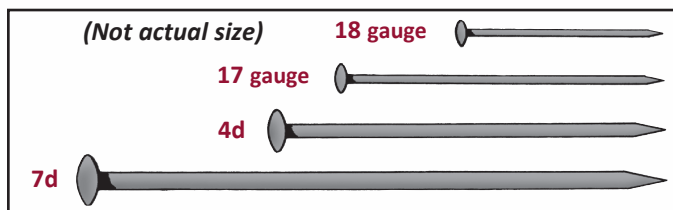

Showing correct placement of staples

Nails for Frame and Super Assembly

For nailing frame top bars to end bars and for bottom bars to end bars use **M00727** (1 1/4"). For nailing wedges use **M00726** (3/4"). For nailing hive bodies and supers, we recommend **M00731**, 7d (2 1/4") galvanized nails. For nailing bottom boards we recommend **M00730**, 4d (1 1/2") galvanized nails.

Item Number	Size and Description	Approx. Qty./lb	Quantity Price/lb.*

Metal Rabbets

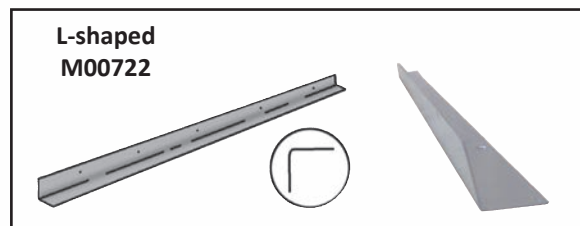

Metal Rabbets protect frame rests in your supers. Light gauge pre-punched and pre-bent metal parts fit over frame rests and nail into place. These metal parts increase the life of your supers and ease super cleaning by protecting the wooden frame rests during cleaning.

M00722 Ship. wt. 25 per lb.

M00722 L-Shaped Rabbet 1-99 ea. \$.25

L-Shaped Rabbet 100-999 ea. \$.22

L-Shaped Rabbet 1000 & over ea. \$.20

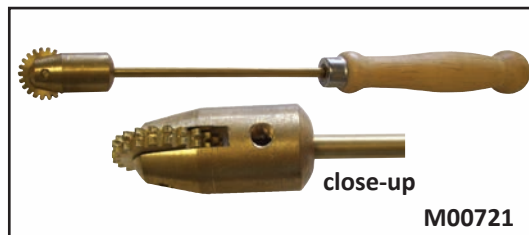

FRAME/FOUNDATION HARDWARE

Cross wiring is necessary to firmly hold some foundations in place. For example, we recommend 4 cross wires when using 8 1/2" medium brood foundation, but only 2 for holding 8 1/2" crimp wire foundation. Beekeepers even find it advantageous to put one cross-wire in bulk comb foundation—then pulling out the cross-wire from the end of the frame prior to cutting the bulk comb. To prevent the wire from cutting into the frame end bars, we recommend using eyelets to protect the frames.

Grooved Spur Embedder

This is another style of spur embedder. It has a groove between the wheels that will help make the job easier. *Cannot be used with crimped frame wire.*

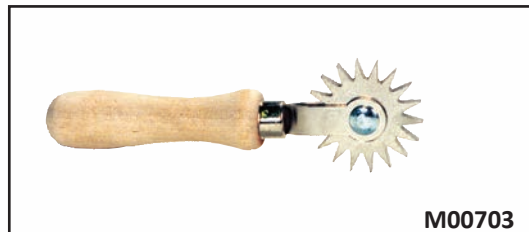

M00721 Grooved Spur Embedder,
Ship wt. 2 ozs. \$9.95

Spur Embedder

Uses hand pressure to fasten wire in any foundation needing horizontal wires for added support. Roll the wide-tooth spur points along each wire. May be used warm (preferable) or cold. Many beekeepers purchase two—keep one heating while the other is in use.

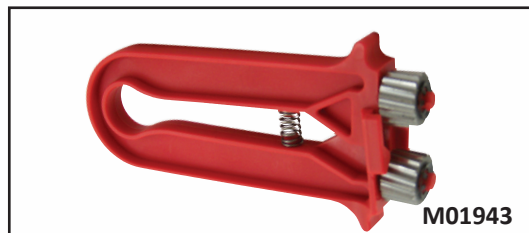

M00703 Spur Embedder, Ship wt. 8 oz. ea. \$10.25

Wire Crimper

Support your wax foundation by tightening and crimping your frame wire with our wire crimper. Helps give wax foundation the extra support it needs.

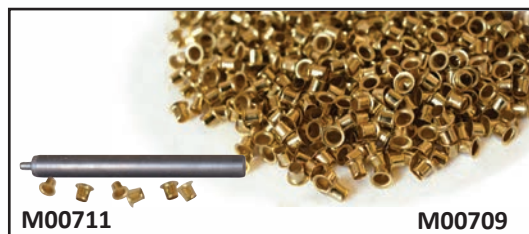

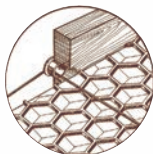

M01943 Wire Crimper,
Ship wt. 2 ozs. \$7.75

Brass Eyelets

Small brass eyelets are punched into the wiring holes in end bars of brood and super frames. Prevents wire from cutting into the wood. Keeps horizontal wires tight. Special punch makes insertion simple and easy. Sold separately.

M00709 1000 Eyelets, Ship wt. 4 ozs. \$7.75
M00710 5000 Eyelets, Ship wt. 1 lb. \$34.95
M00711 Punch, Ship wt. 6 oz. \$3.95

Frame Wire

Top grade tinned wire made especially for the bee industry with great tensile strength. Should always be used for horizontal wiring brood or extracting frames in which plain or unwired foundation is to be used. May also be used with crimp-wired foundation to gain even greater strength. This wire is 26 gauge.

M00705 1/2 lb. Spool, Ship wt. 1 lb. \$5.75
M00706 1 lb. Spool, Ship wt. 2 lbs. \$9.45
M00707 5 lb. Spool, Ship wt. 7 lbs. \$30.95

Frame/Form Board

For use with 9 1/8", 6 1/4" and 5 3/8" frames. This is a useful tool for nailing frame wedges and inserting foundation in frames. It is a good companion for the spur embedder **M00721** or **M00703** (shown above). It supports the frame with foundation while embedding. May also be used for hand-wiring frames.

B10301 Form Board, Ship wt. 5 lbs. \$11.90

Electric Embedder and Transformer

—Sold Separately—

This embedder, used with the 12 volt transformer shown below, heats horizontal frame wire so it is well-attached, but does not mar the foundation. Embeds one wire at a time.

M00701 Embedder Only, Ship wt. 2 lbs. \$54.95
M00702 12 Volt Transformer Only, Ship wt. 2 lbs. \$59.95

Complete Round Section Super Ready to Use Except for Installing Foundation

Round Section Super is shipped assembled. Purchase foundation below, (item number **F31001**). Insert it between section half frames, and place super on the hive. Ship wt. 15 lbs. (Covers sold separately—See left hand column—Clear or opaque.)

M01024	10-frame ea.	\$119.95
M010248	8-frame ea.	\$119.95

Each portion of the foundation becomes a part of the comb honey for sale. We use the utmost care in selecting only the very finest of virgin capping wax for the manufacturing of our thin surplus foundation. The raw wax is then washed, cleaned and filtered so only **pure 100% beeswax** is present in the finished sheet of foundation. Strong side-walls on each cell help your bees to finish beautiful sections of sparkling white comb honey.

FOR CUT COMB & CHUNK HONEY PRODUCTION

We also recommend 4 3/4" Thin Surplus and 4 3/4" Cut Comb foundation. All of these products are listed on page 19.

5 11/16" Comb Honey Supers—empty

COMB HONEY PRODUCTION

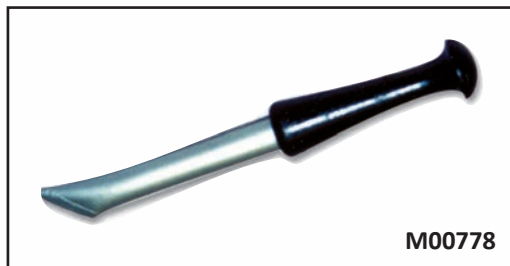

Honey In The Comb

Learn How To Produce Comb Honey

By Eugene E. Killion. Twelve comprehensive chapters cover every aspect of comb honey production in both round and square sections. 165 brand new photographs and equipment drawings, completely cross-indexed. 148 pages, softbound in honey gold. Also, don't miss the DVD by Gene Killion complementing his book of the same title. An excellent guide and aid for the novice and experienced beekeeper alike.

- M00006** Honey in the Comb Book, Ship wt. 3 lbs. ea. \$10.50
- M001242DVD** Honey in the Comb DVD, Ship wt. 4 ozs. ea. \$19.95
- M00006SET** Honey in the Comb Book & DVD Set, Ship wt. 4 lbs. ea. . . . \$29.95

Wax Tube Fastener

Wax Tube Fastener is ideal for securing foundation into grooved top bar (cut comb and chunk honey) frames. Metal cylinder is filled by lowering into container of hot, liquid beeswax. When cylinder is filled, wax is retained in cylinder by placing finger over air hole. With foundation in place, the wax tube fastener is run along the top bar groove. By removing finger from the air hole, a small amount of wax flows out to cement the foundation to the top bar.

- M00778** Wax Tube Fastener, Ship wt. 5 ozs. ea. \$6.95

Frame Cleaner

A handy tool to clean top or bottom groove of any style frame. Quickly removes wax and propolis from grooves. Especially useful for comb honey production.

- M00753** Frame Cleaner. Ship wt. 1 oz. ea. \$6.25

Section Scraping Knife

This knife is specially designed and constructed for cleaning wax and propolis from finished sections. The notch in the top is ideal for edges—it prevents cutting into the honey.

- M00770** Section Knife,
Ship wt. 3 ozs. ea. \$15.75

Serrated Comb Honey Knife

Serrated Comb Honey Knife —The best comb cutting knife we have found. This extremely sharp and serrated knife makes slicing through comb a breeze.

- M00336** Serrated Comb Honey Knife,
Ship wt. 2 ozs. ea. \$11.95

Comb Cutter

Comb Cutter —Cut 4 1/8" x 4 1/8" sections of comb honey to fit standard cut comb boxes, M00250, (see page 107). All food grade stainless steel. Sharpened cutting blade. Sturdy stainless steel handle. Made in the USA.

- M00937** Stainless Steel Comb Cutter,
Ship wt. 6 ozs. ea. \$12.95

Small Comb Cutter

Small Comb Cutter —Cut 3 3/4" x 3 3/4" sections of comb honey to fit, M00251, Economy Cut Comb Boxes (see page 107). All food grade stainless steel. Sharpened cutting blade. Sturdy stainless steel handle. Made in the USA.

- M00938** Stainless Steel Comb Cutter,
Ship wt. 6 ozs. ea. \$12.95

WORLD'S BEST BEE SMOKERS

COPIED BY MANY - BUT MATCHED BY NONE

Premium Smokers • Excellent Smoke Output • Superior Bellow Design

“The Design That Works”

Dadant bee smokers are still *Made in the U.S.A.* by us.
Don't settle for less than the best, in the original fashion of the Bingham smoker.

These smokers are of the original Bingham design that is of time proven quality. Dadant has been manufacturing these smokers since they acquired the A.G. Woodman company in the 1970's, and are proud to produce the smoker that everyone tries to duplicate.

4 Models

Smoker Bellows Replacements

- Flexible, tough Naughehyde fabric
- New face boards hold staples firmly
- Aluminum easy-grip edging
- Air valve for best operation

BEEHIVE MOVING ACCESSORIES

Hive Carrier

Convenient tool to transport heavy hives or supers. Lets two people move a hive from the truck to the yard and move supers from the hive to the truck. Galvanized steel frame for durability. Designed for easy operation. **Hive sold separately.** Ship wt. 8 lbs. ea.

M00318 \$80.00

Single Super/Hive Carrier

Convenient tool to transport heavy hives or supers. Lets one person move a super from the truck to the yard. Galvanized steel frame for durability. Designed for easy operation. **Hive sold separately.** Ship wt. 8 lbs. ea.

M00325 \$73.50

Ratchet Straps

Unique shock absorbing tie down that incorporates three of the most versatile tie down principles into one superior system. Maintains constant tension and acts like shock absorbers keeping your load secure. Dependable, Durable, and Rust Resistant. Backed by manufacturer 2 Year warranty, this is the best tie down strapping on the market for your Bee Hives, Bobcats, or Hummer Bees.

M01395 10' Black Cam Strap, Ship wt. 1.45 lbs. \$24.95

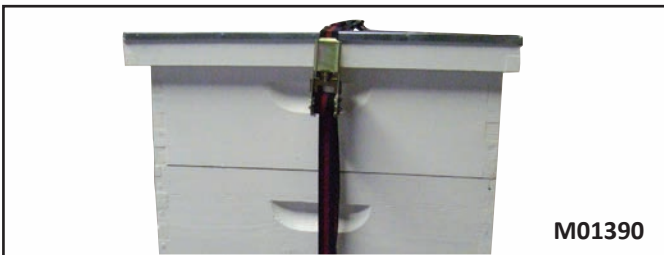

M01396 18' Ratchet Strap, Ship wt. 4.5 lbs. \$45.95

Hive Net

For use when moving hives from yard to yard or to keep bees inside the colony due to herbicide spraying. Ship wt. 2 lbs., ea.

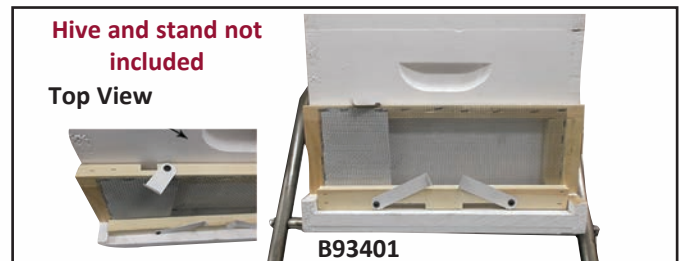

V02000 \$29.95

Black/Red Tie Down Strap

No nails, staples or ropes ever again! Easy-to-use tie down straps with tensioning buckle secures your beehive every time. No slipping — No worries! Ship wt. 9 ozs. ea.

M01390 \$8.95

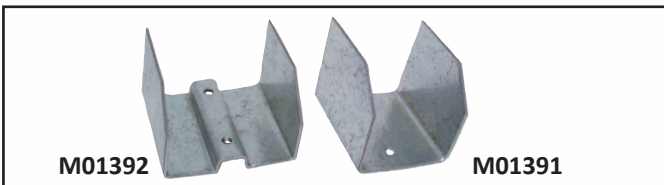

Moving Robber Screen

A two-in-one tool. These screens can be left on all season long. Close the screen off to help cut down on weaker colonies being robbed and use the top exit, or close them off completely to move hives from one location to the next.

Available in 8 and 10-frame. Ship wt. 1 lb. ea.

10-FRAME - B93401 \$18.95

10-FRAME HIVE STANDS AND LANDING BOARDS

Dadant Stainless Hive Stand

Dadant-made Stainless Steel Hive Stands sleek design is perfect for all types of apiaries. From a single hive operation to a 20 colony out yard, these stands are made to last. Ships knocked down. Easy to assemble.

M00698 Dadant Stainless Hive Stand,
Ship wt. 8 lbs. ea. \$44.95

Hive and frames not included

Ultimate Hive Stand Deluxe Model

The Ultimate Hive Stand Deluxe Model is the only hive stand you will ever need. It has a classic design that is fully functional and looks great in any apiary or garden. It has swing out frame holders to make working the hive easier and when not in use will fold up out of the way. The stand raises the hive 12 inches off the ground for easier access and better ventilation. It works with any bottom board and no wooden hive stand is needed. It is fast and easy to assemble, usually taking less than 2 minutes with a screwdriver. The ballast ports allow the legs to be filled with sand for additional stability. It is made from recycled materials.

M01693 10-frame Ultimate Hive Stand Deluxe Model,
Ship wt. 10 lbs. ea. \$79.95

M01696 10-frame Beemax Deluxe Hive Stand,
Ship wt. 10 lbs. ea. \$89.95

AntCant

The AntCant™, ant barrier coating (patent pending) was scientifically developed to be a non-toxic, low maintenance deterrent from ant infestation. The coating works by preventing the ants from attaching to an inclined coated surface. Since they can't get a grip, they fall off and do not make it to the attractant (food, garbage, etc.) After being discouraged the ants give up and leave! Once the ants know the barrier is in place they don't seem to even re-challenge it! Includes 3.5 oz. bottle and a roll of 2" aluminum tape

M001440 AntCant
Ship wt. 1 lb. ea. \$27.50

Unassembled Hive Stand 10-Frame

To eliminate moisture problems and provide insulation, it is important to keep the hive from making contact with the ground. This durable wood hive stand protects the hive bottom board and gives bees an angled landing area. **Unassembled.**

M00695 Ship wt. 5 lbs. ea. \$15.95
M00696 c/5, Ship wt. 18 lbs. \$69.95

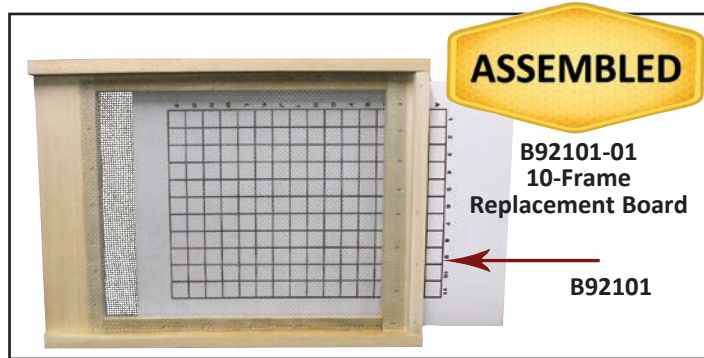

10-FRAME HIVE STANDS AND LANDING BOARDS

Cypress Bottom Board with West Trap, Landing Board and IPM Board

This ultimate bottom board does it all. Made of Cypress this all-in-one bottom board will trap and kill SHB, allow you to check for mites with the IPM board, and give your bees a landing board to land on when coming back from foraging. Comes complete with west beetle trap and IPM board. **Fully Assembled.**

M60040 10-frame Cypress Bottom Board, Ship wt. 6.5 lbs. \$35.95

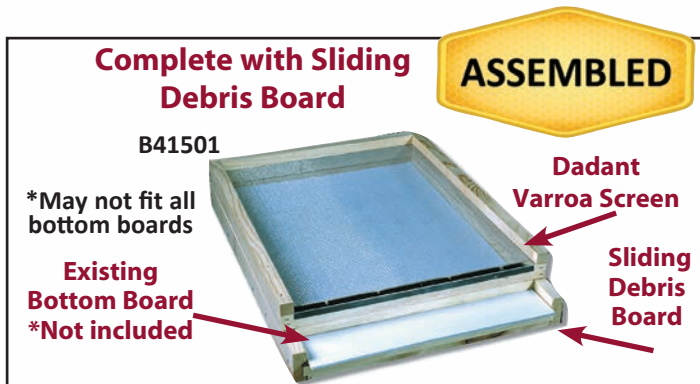

Screen IPM Board

This integrated pest management bottom board comes complete with Varroa monitoring board. Access the screen from front of the hive below the bottom board. Leave the monitoring board out when not monitoring Varroa levels to provide extra ventilation and allow mites to fall through to the ground.

10-FRAME - B92101 Ship wt. 3 lbs. ea. \$21.95
5+ \$19.95

10-Frame Replacement Boards

B92101-01 Ship wt. 1 lb. ea. \$5.95
5+ \$5.65

Complete with Sliding Debris Board

Dadant Wood Bound Varroa Screen

- Mites fall through the screen onto bottom board or debris tray to die if they fail to crawl up and find a honey bee.
- Monitor effectiveness of chemical treatments
- Bees can't get through the screen

B41501 Dadant Wood Bound Varroa Screen, Ship wt. 4 lbs. ea. \$17.95

M00934 Sticky Board (not included with Varroa Screen), Ship wt. 4 ozs. ea. \$3.50

• If more than 100 mites are caught naturally within a 48 hour period, a chemical treatment may be needed. Contact your state apiarist for guidelines.

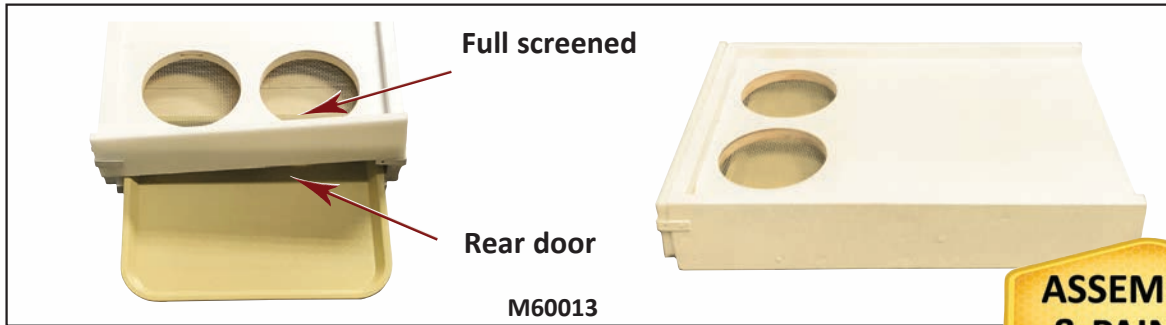

Ponderosa Pine Bottom Board

The standard 10-frame bottom board is the floor of the hive and is an essential part of the hive. It provides the hive entrance and proper spacing for the bees to work. Reversible feature allows full 3/4" summer entrance or 3/8" entrance when reversed for winter. Unassembled. (*Nails included - standard only).

JÖNZ HYGIENIC BOTTOM BOARD

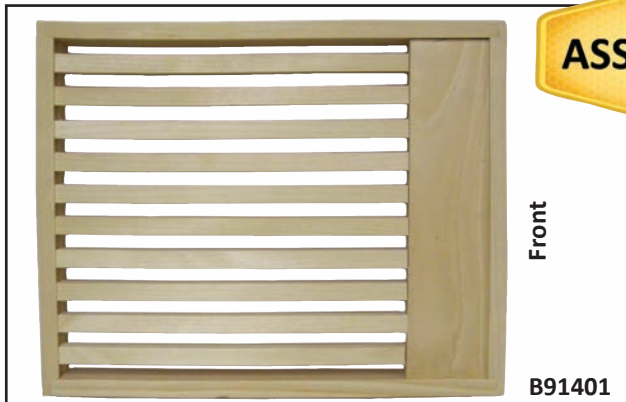

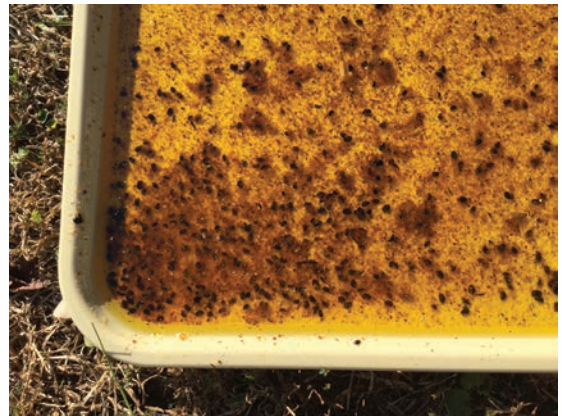

ASSEMBLED & PAINTED

Jönz Hygienic Bottom Board Assembled & Painted

The JÖNZ Hygienic Bottom Board™ (HBB) (patent pending) helps control Small Hive Beetles without significant loss of pollen from the hive. Bees often drop pollen balls when working in the hive. Full-screened bottom boards lose all this dropped pollen through the screen. That is why oil trays beneath full-screened bottom boards quickly turn into sludge. Field tests show that Small Hive Beetles instinctively try to hide in the HBB’s recessed screened receptacles, only to fall through the screens and into the HBB’s shallow oil tray. Very little dropped pollen ends up in the tray—only dead beetles and small amounts of hive debris pushed into the receptacles by the hygienic bees. With more pollen available, the hive supports more brood and becomes a stronger, healthier hive. The HBB’s rear door also provides quick and easy access to the oil tray without disturbing the bees. **Fully assembled and painted.**

M60013 JÖNZ Hygienic Bottom Board, Ship wt. 10 lbs \$49.95

ASSEMBLED

Slatted Rack

You asked for it and here it is. The slatted rack sits in between your bottom board and brood box, providing ventilation and extra space for the bees. The additional room provided when using the slatted rack is thought to help reduce swarming. Frames line up with the slats so varroa will fall through the screens in your bottom boards. Ship wt. 4 lbs. ea.

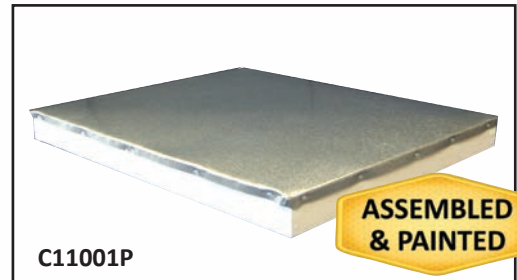

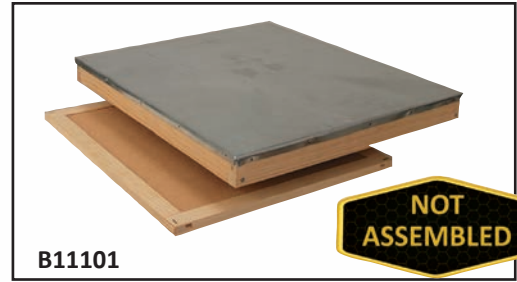

B91401 10-frame \$18.95
 5+ \$17.75

10-FRAME TOP COVERS

Telescoping Cover w/ Inner Cover

A strong, rigid cover with full thickness interlocking side rims. Interlocking ends are pre-drilled for easy handling. A heavy galvanized metal top has all four edges turned down to protect the edges of the wood. Metal top has pre-punched holes for nailing. This entire cover "telescopes" down over the inner cover and a portion of the top super. An inner cover is included. Unassembled.

Brought to you from our Canadian friends at NOD apiaries this two story bee cozy is sure to keep your bees warm all winter long. Slips over two double deep 10 frame boxes. R8 value.

- M61005** Bee Cozy Winter Wrap 10-Frame
Ship wt. 3 lbs. \$29.95

AP23 Winter Patties

Dadant was the first to bring you the winter patty and continues to manufacture the best feeds available for winter and spring build up. Our winter patties are available in 10 lb and 40 lb boxes. When Gabe first started playing around with the idea for a winter feed he knew the bees still needed a small amount of protein. At 4% protein and 96% carbohydrates this became the perfect complete winter honey bee feed and after two successful years overwintering hives running light on food stores, Dadant thought he had to share this with the rest of the beekeeping community. From the very start they have been a very popular item and we have been told time and time again that without them many hives would have succumbed to the harshness of winter.

Get your freshly made winter patties today to have strong healthy hives come spring!

Super Shim

The super shim is to be used only when your honey supers have been completely drawn out. Place shim above your queen excluder and below your honey super to give the bees an upper entrance / exit from the honey supers. Note: bees will burr comb the space from bottom of shim to bottom of super should you leave it on too long.

8-FRAME - B100148 Ship wt. 2 lbs. ea. \$4.18
5+ \$3.86

Assembled 8-Frame Inner Cover

Masonite inner cover is strong and durable. Use with bee escape to clear bees from honey supers.

B15601 Masonite Inner Cover
Ship wt. 3 lbs. ea. \$12.95

Assembled 8-Frame Ventilated Inner Cover

Use our fully assembled 8-frame ventilated cover to help with ventilation and increase honey production.

B17501 Ship wt. 1 lb. ea. \$13.75

PONDEROSA PINE LASTS LONGER

Plywood Inner Cover with Feeder Hole

These inner covers work great to feed your colonies while keeping pesky critters including robbing bees away. Place an empty hive body on top to act as a shell and then your telescoping cover. Use a standard Boardman feeder cap in hole with a quart or 5 lb round container of syrup.

M60050 Plywood Inner Cover 8-frame
Ship wt. 1 lb., ea. \$12.20

Innerview Inner Cover

We are pleased to offer the Innerview inner cover for 8-frame beehives. This innovative inner cover is sure to be a crowd pleaser. Need to take a quick peek and see how your girls are holding up but don't have time to don your suit and light up your smoker. The Innerview will allow just that. Made of laminated glass it is sure to last many seasons. Will not excessively scratch or cause profuse condensation like plexi or plate glass. Comprised of two layers with a PVB layer in the middle which aides in insulation. Get yours today and show anyone the inside of your hive at any time. Ship wt. 7 lbs

M60058 Innerview 8-frame, \$57.95

Slatted Rack

You asked for it and here it is. The slatted rack sits in between your bottom board and brood box, providing ventilation and extra space for the bees. The additional room provided when using the slatted rack is thought to help reduce swarming. Frames line up with the slats so varroa will fall through the screens in your bottom boards. Ship wt. 4 lbs. ea.

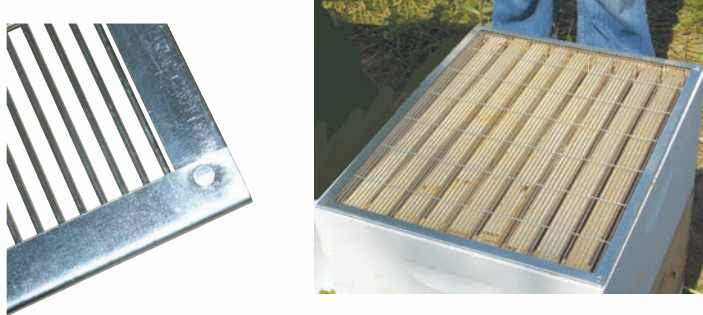

B914018 Slatted Rack 8-frame \$18.95
5+ \$17.75

8-FRAME EXCLUDERS & STANDS

Metal Bound Excluder

The metal bound excluder has the same precisely spaced welded wires as the wood bound excluder. This wire grid is edged (bound) with metal on all edges.

M00698

Ultimate Hive Stand Deluxe Model

The Ultimate Hive Stand Deluxe Model is the only hive stand you will ever need. It has a classic design that is fully functional and looks great in any apiary or garden. It has swing out frame holders to make working the hive easier and when not in use will fold up out of the way. The stand raises the hive 12 inches off the ground for easier access and better ventilation. It works with any bottom board and no wooden hive stand is needed. It is fast and easy to assemble, usually taking less than 2 minutes with a screwdriver. The ballast ports allow the legs to be filled with sand for additional stability. It is made from recycled materials. Ship wt. 10 lbs. ea.

M01694 8-frame Ultimate Hive Stand Deluxe Model **\$79.95**

M01694

Assembled 8-Frame Cedar Hive Stand

Our 8-frame Cedar hive stand will keep your bottom boards up and off the ground and give you years of service. Both solid and screened bottom boards will work with these. Ship wt. 5 lbs. ea.

C02305 **\$15.90**

C02305

NEW!

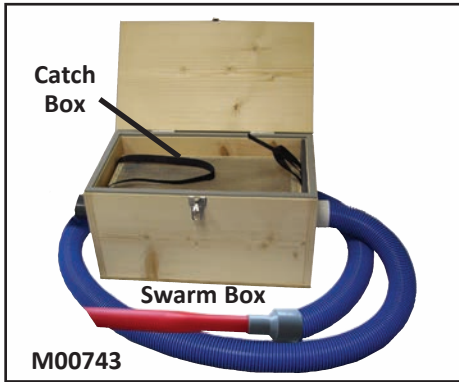

AntCant

The AntCant™, ant barrier coating (patent pending) was scientifically developed to be a non-toxic, low maintenance deterrent from ant infestation. The coating works by preventing the ants from attaching to an inclined coated surface. Since they can't get a grip, they fall off and do not make it to the attractant. Includes 3.5 oz. bottle and a roll of 2" aluminum tape.

M001440 AntCant
 Ship wt. 1 lb. ea. **\$27.50**

SWARM PHEROMONES AND CATCH BOX

M00743

Swarm Box

TX beekeeper Dwain Cleveland brought his swarm box to our attention. After seeing it in action, we thought we'd bring it to yours. Outer box connects to most shop vacs. Additional adapters may be needed as hoses will vary. Inner capture box holds approx. 3 lbs. of bees. More catch boxes may be needed, depending upon the size of the swarm you're trying to catch. **DVD included.** Ship wt. 32 lbs., ea.

M00743 \$194.95

M00743CB

Frames Not Included

Catch Box

For the larger swarm, more catch boxes may be needed. These are made to fit our swarm box only. Catch Box, Ship wt. 7 lbs., ea.

M00743CB \$64.95

Hive Not Included

M60065

Entrance Excluder

The entrance excluder will keep your queen and drone bees inside the hive. Useful tool when seeing hives preparing to swarm in the spring. Place entrance excluder on front of hive with nails to pin it in place. Use while installing new packages and during the winter as your mouse guard. Ship wt. 1 lb., ea.

M60065 \$6.95

M00741

Swarm Catch

Swarm Catch contains Nasonov: the orientation pheromone, sometimes called the "come hither" pheromone. On average, swarms will occupy 50-80% of catch boxes with Swarm Catch (provided there is a reasonable amount of swarming in the area). *Place Swarm Catch lure into an empty super with comb (comb should not contain honey). Store lures in the freezer until use.*

- Capture swarms from your own hives thus reducing loss of honey bees.
- Add to your hive count and honey yield by capturing stray swarms from other hives in the area.

M00741 2 Vial Pack,

Aids in the control of varroa mites and provides optimal ventilation for your nucs.

B92901NA Nuc Screened Bottom Board,	Ship wt. 3 lbs. ea.	\$16.95
--	--------------------------	---------

QUEEN REARING, SUPPORT HIVES AND QUEEN INTRODUCTION

Support Hive

Support hives are needed in every out yard you have. Two 4-frame hives make up the support colonies. Great for boosting a weak hive or for holding queens in case a replacement is needed. Entrances are on opposite ends to keep each colony from encroaching on the others territory. Comes with a special divided bottom board, single divided deep brood box, two 4-frame nucs and two inner covers w/feed hole. Fully assembled and ready for a coat of paint. **Top covers and frames sold separately.**

- M60035** Support Hive, Ship wt. 28 lbs. ea. **\$110.00**
- M60035-A** Bottom boards for Support Hive, Ship wt. 4.75 lbs. ea. **\$22.95**
- M60035-B** Deep box w/ divider, Ship wt. 10.5 lbs. ea. **\$27.00**
- M60035-C** 4-frame Nuc boxes for Support Hive, Ship wt. 5 lbs. ea. **\$21.00**
- M60035-D** 4-frame Inner covers for Support Hive, Ship wt. 1.5 lbs. ea. **\$9.95**

Queen Rearing Hotel

Our queen hotel is exactly what you need to continuously raise your own queens. Split into 4 – 2-frame nucs or 2 – 5-frame nucs. When you find a frame with a queen cell, put it and another frame into our queen rearing hotel and come back in a few weeks to find your mated queen or queens ready for placement into a split or queenless colony. You must use a standard 10-frame telescoping lid with this unit which is sold separately.

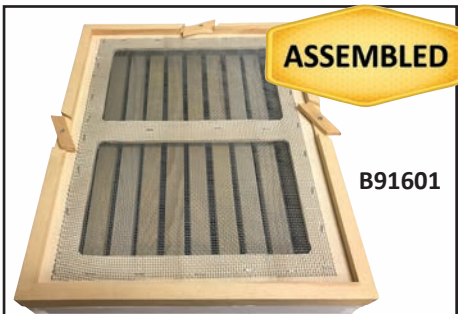

- B55101** Ship wt. 20 lbs. ea. **\$44.00**

Cloake Board

The Cloake board is a device invented by New Zealand beekeeper Harry Cloake to raise queens with a minimum amount of equipment. Consists of a wooden frame w/queen excluder and metal tray and involves a series of stages which divide a colony into a queen right lower colony and queenless upper colony which improves acceptance of grafted larvae. Requires knowledge in grafting larvae. Full set of instructions provided.

- B41301** 10-frame Ship wt. 6 lbs. ea. **\$34.00**
- B413018** 8-frame Ship wt. 6 lbs. ea. **\$34.00**

Double Screen Board

The double screened board makes requeening easy and efficient. When dividing a colony, remove your top chamber and place your d/s on top of the bottom chamber and place your split on top of the d/s. The older foraging bees will return to the bottom chamber leaving the younger bees, which will accept the new queen with much less stress. You can also replace the d/s with a queen excluder and run a double queen colony.

- 10-FRAME - B91601** Ship wt. 3 lbs. ea. **\$22.50**
- 5+ **\$19.95**
- 8-FRAME - B916018** Ship wt. 3 lbs. ea. **\$22.50**
- 5+ **\$19.95**

Requeening Frame

Our re-queening frame will work with most wooden queen cages. This allows the queen to be readily accepted prior to being released. Be sure to remove the cork from the candy end and secure queen cage to frame.

- M01592** Ship wt. 2 lbs. ea. **\$12.95**

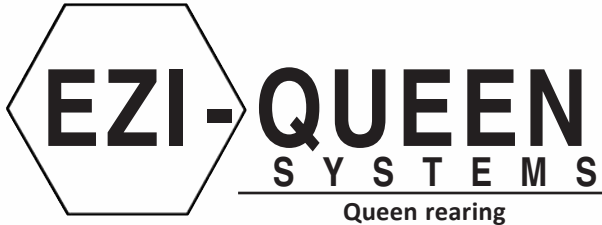

Nuc Introduction Board

The nuc introduction board will help you unite your 5-frame nucs into a standard 8 or 10-frame colony. Place on top of your colony and cover with a sheet of newspaper. Spray the paper with sugar water and the bees will eat through the paper uniting the two colonies together. After a few days move the frames from the nuc into your standard box.

- 10-FRAME - B41401** Ship wt. 2 lbs. ea. **\$8.95**
- 8-FRAME - B414018** Ship wt. 2 lbs. ea. **\$8.95**

RAISE YOUR OWN QUEENS WITH THE EZI QUEEN SYSTEM

The system assumes basic queen rearing knowledge, see below for book *Contemporary Queen Rearing* (M00065).

Shown on hive
(hive not included)

EZI Complete System

Trap the queen with our push-in style cage and mark her as you normally would. No need to remove her from the frame. Less stress than other models. Ship wt. 5 lbs.

M01320 \$229.95

Queen Bee Rearing System includes:

- 1-Lay Cage Unit
- 1-Front Cover
- 1-Front Cover Plug
- 1-Rear Cover
- 42-SNAP-OFF Plug Strips (10 plugs per strip)
- 21-Cell Bars
- 42-Individual Queen Cells
- Instruction Manual

Benefits of our Queen Rearing System

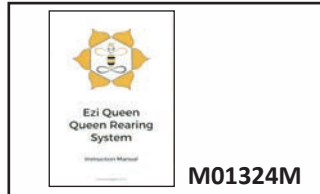

- **5 MINUTES** to transfer eggs or larvae into 420 queen cells
- **WITHOUT TOUCH!** Our transfer of eggs or larvae makes this system unique to the industry
- No need for individual grafting
- Advanced technology utilizing easy-step lay cage design for high yield production of queen bees
- The EZI-Queen System comes ready to assemble for the hive

With our EZI-Queen Rearing System

- ✓ eggs are layed out within 4 hours
- ✓ eggs hatch to larvae within 72 hours and in 12 days your queens are ready to emerge

Close-up of suit material

Ventilated Suit and Jacket

We are pleased to offer what we feel is the finest vent suit and jacket in the industry. Synthetic foam is sandwiched between 100% polyester mesh making this suit the coolest, most ventilated suit available on the market. The hat veil features an adjustable Velcro strap to help insure a true fit. Elastic cuffs around the wrist and ankles. Ankles are zippered for easy on/off. Two large pockets on front waist area and one on front chest provide room for needed tools. Suit has extra padding at the knees. Jacket offers elastic around the waist along with two large pockets and one large pocket on chest.

BEEKEEPING SUITS

Dadant Zipper Veil Suit

Zipper Veil-Suit Combination was designed by *Dadant & Sons*. We added all the features our beekeepers wanted for total protection and comfort for a full day's work in the bee yard. This Zipper Veil-Suit Combination offers the fine features of the Dadant Folding Veil and the Dadant Coveralls to provide total protection for the beekeeper. Zippered side openings allow full protection and easy access to trouser pockets. Easily slip on over boots or shoes with generous zippered bottom pant legs. The location of the veil zipper holds the veil in place assuring perfect vision while allowing total freedom of movement. Easy on and off. We recommend using with the Dadant Plastic Sun Helmet. When ordering, state catalog number and size. Because of numerous sizes, branch locations may be temporarily out-of-stock on some sizes. Ship wt. 4 lbs.

Ventilated Suit & Jacket

V01266

Arm & Side ventilation

We are pleased to be the first to offer a partially ventilated suit and jacket. The ventilation areas are located along your sides running from your waistline to your wrist in the jacket. The jacket offers 4 front pockets two with Velcro and the other open for quick access. The full suit is ventilated on the outside of the legs starting at the ankles and ending at the wrist. The hood is fully ventilated on both the suit and jacket. Optimum air flow in the right places make this suit and jacket perfect for your trips into the bee yard.

- Can be used with both medium and deep hive bodies
- Easy to clean, virtually maintenance free
- Made in USA

M01508 Ship wt. 1.5 lbs. ea. \$24.95

BEE FEEDERS

4 Jar Feeder

This 4 jar feeder will keep you from having to refill jars every other day when introducing package bees or nucleus colonies. This will also come in handy when trying to get hives up to weight before winter. Place above inner cover hole and use a brood box as a shell. **Jars and lids not included.**

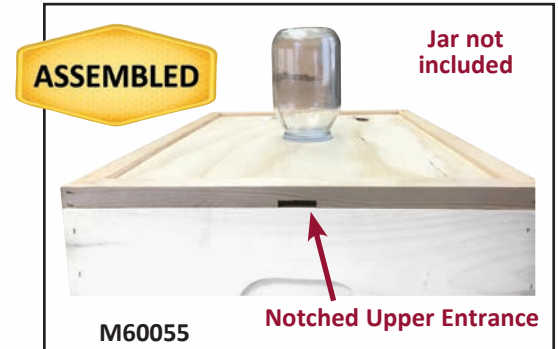

- M00825 Ship wt. 1 lb. ea. \$7.20
- M00887 Feeder Lid Only, Ship wt. lbs. ea. \$0.80

Plywood Inner Cover w/ Feed Hole

These inner covers work great to feed your colonies while keeping pesky critters including robbing bees away. Place an empty hive body on top to act as a shell and then your telescoping cover. Use a standard Boardman feeder cap in hole with a quart or 5 lb jar of syrup. **Jar and lid not included.**

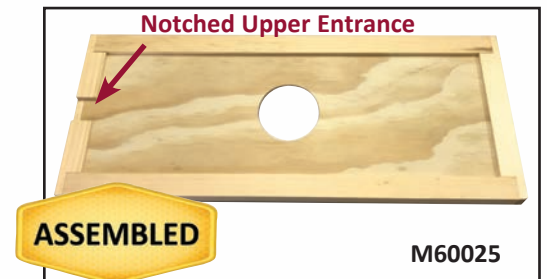

- M60055 10-Frame, Ship wt. 1 lb. ea. \$12.20
- M60050 8-Frame, Ship wt. 1 lb. ea. \$12.20

Plywood 4 & 5 Frame Inner Cover w/ Feeder Hole

Our nuc inner cover is the same one that comes with our support hive. It works well with both 4 and 5-frame nuc boxes. Place empty nuc box on top of inner cover to act as a feed shell. Invert feed jar in hole. Standard G-70 Boardman Feeder lid fits hole. **Jar and lid not included.**

- M60035-D Nuc Inner Cover w/ Feeder Hole, Ship wt. 1.5 lbs. ea. \$9.95
- M00887 Feeder Lid Only, Ship wt. lbs. ea. \$0.80

Plywood Nuc Top Cover Only

This 5-frame nuc cover is fully assembled. G-70 feeder cap fits the hole in the center and makes feeding your start up colonies a breeze. **PAINTING IS REQUIRED.**

- M60030 Plywood Top Cover only, Ship wt. 3 lbs. ea. \$9.95

Feeder Jars - Glass 3 LB Quart Jar and 5 LB Round Jar

We have been using these 3 lb quart and 5 lb round jars as feed jars for many years. Easy to clean and refill, these can be used with our 4-jar feeder, our new plywood inner covers with feed hole and for your honey storage needs. Each jar makes a great container for honey and some use them exclusively for their payments to the landowner of the property the beekeepers hives are sitting on. It is also known as a yard rent jar. Both take a standard G-70 closure.

- 3 LB Jar**
- 5 LB Jar**
- ✘ M001931 Ship wt.. ea. \$14.75
- ✘ M001921 Ship wt.. ea. \$17.50
- M00887 Feeder Lid Only, Ship wt. lbs. ea. \$0.80

Feeder Pail - 2 Gallon White Plastic Pail

These 2 gallon pails work well as feeder pails. When using as a feeder put 6-7 pin prick size holes in the center of the lid. Invert over the hole in the inner cover. This will give your bees easy access to the feed. Use an empty brood box as a shell to protect the hive from the elements. If punched holes are too large the syrup will not stay suspended. Lids come unpunched.

- ✘ M00238 Ship wt. 1 ½ lbs. ea.
- 1-99 Pails. \$4.85
- 100-up Pails \$4.65 ea.

FEED CHART

FEED ADDITIVES & SUPPLEMENTS	METHOD OF APPLICATION	TIME OF YEAR TO APPLY
AP23 & Brood Builder	These pollen subs may be fed either dry or in patty form. If feeding patties and running double brood boxes, place patties between boxes. If running singles feed on top of frames.	Feed in spring to boost colonies populations and in the fall after miticide treatments. May also be fed any time a pollen dearth occurs.
AP23 Microbials	Shake 1/4 cup dry feed on top bars of hives brood chamber reapply every seven days for five weeks removing infected comb as needed.	Apply any time of year. Do not use antibiotics while using AP23 Microbials.
Brood DFM	Mix 3 tablespoons of Dadant AP23 with 1 tablespoon of DFM and dust 1/4 cup total per hive. Spread over top bars in brood nest area.	Apply spring, fall, and during migratory movement. Can be applied two weeks after any treatments for varroa, nosema, foulbrood and essential oil treatments.
Honey - B - Healthy	Mix 1-2 teaspoons per quart when fed in sugar syrup. Use up to four teaspoons when used as a spray with 1:1 syrup in place of a smoker to calm bees.	Feed during late winter, early spring, fall or dearths of nectar and may also be used to build up nucs, weak colonies and swarms.
HBH Super Plus	Mix 1 tsp. per quart of various sugar water mixes which can be increased to 3 tsp per quart. For patties test effect of 1 tsp. per lb and adjust as needed.	Best in Spring and Fall but can be used any time of year. Feed with Honey Supers removed.
HBH Vitamin B	Add 1/2 tsp. to each quart or liter of sugar water when feeding. If used in protein patties, add 1/2 tsp. per 3 lbs dry	Best in Spring and Fall but can be used any time of year. Feed with Honey Supers removed.
Complete	Feed Complete anytime you are feeding sugar syrup. Can be fed in syrup, by drench method and in nutritional supplement protein patties.	Apply Complete whenever feeding is needed.
Nozevit Plus	15-20 drops per colony mixed in 1/3 quart sugar syrup or sprayed on frames. May be fed in pollen patties 20 drops per 1 pound.	Use as a feed supplement two times in the spring and fall at 10 day intervals
Optima	It is advised to mix 1 - 2 teaspoons of Optima per gallon of syrup when fed through preferred hive feeder. A 100 ml bottle will make 20 gallons of syrup. When feeding by drench method it is advised to mix 4 teaspoons per quart of syrup and drench at rate of 1/3 quart or 10 - 12 ounces solution per colony 4 times at 4 days apart. When feeding in pollen patties 1/2 teaspoon of optima per lb of patty is recommended.	Whenever feeding is needed or bees are overstressed.
Sugar Syrup	For spring feeding mix 1 part sugar to 1 part water to stimulate foraging. For fall feeding mix 2 part sugar to 1 part water if not enough honey has been stored for winter.	Apply when needed.

FEED ADDITIVES

Nozevit plus

Nozevit Plus incorporates the original highly popular Nozevit product and adds additional whole plant polyphenols aimed at the longer term health of the honey bee while maintaining the same application rate and methodology. It is an all-natural product helping to promote and maintain the intestinal integrity of the honey bee along with the long-term health and vitality of your bees.

- M01955** - 50 ml, Ship wt. 1 lb. \$24.95
- M01956** - 250 ml, Ship wt. 1 lb. \$109.95
- M01958** - 1 liter, Ship wt. 3 lbs. \$299.95

M01956

Recommended feeding for Nozevit

- 1/3 quart or approximately 10 ounces of light syrup with 1 ml of nozevit or 20 drops
- Apply by either drenching or spraying syrup directly on top of frames in hive
- For preventive care we recommend feeding your bees two times, 10 days apart in spring, fall and during summer nectar dearths.
- For bees under extreme stress feed four times at 4 days apart
- Add to your pollen patties. 20 drops per pound or for the larger beekeeper 500 ml to 310 lbs. of dry product.
- Always store unused Nozevit in a cool dark location

♦ 50 ml bottle of Nozevit will feed 50 hives one time when mixed into 4 gallons or 15 liters of syrup
 ♦ 250 ml bottle of Nozevit will feed 250 hives one time when mixed into 22 gallons or 83 liters of syrup
 ♦ 500 ml bottle of Nozevit will feed 500 hives one time when mixed into 44 gallons or 167 liters of syrup
 ♦ 1000 ml bottle of Nozevit will feed 1000 hives one time when mixed into 88 gallons or 333 liters of syrup

M01923 M01935

Complete

“Complete” contains full strength Nozevit, Optima and Bee Cleanse. The most “complete” food additive on the market containing more than 14 essential oils, amino acids, vitamins and minerals. One liter will feed up to 200 colonies by drenching or 400 colonies in sugar syrup.

Plastic Pump Sprayer

This is the best top quality pressurized pump sprayer we have ever run across. With a 1 liter capacity, it requires fewer fillings. Ideal for spraying a calming dose of **Honey-B-Healthy**. Add **Nozevit plus** to your spray and make the most of your colonies. *See Recipe*.

M01922 Plastic Pump Sprayer, Ship wt. 2 lbs. ea. \$29.95

Recipe

- 2 Heaping Tbs. Sugar
- 2 Tbs. Honey-B-Healthy
- 2 Tbs. Nozevit plus

Mix with 1/2 sugar to 1 part water or 1:1 if a thicker spray is preferred. Makes 1-1/2 liters.

M01927

Optima

Optima is a new all natural honey bee food supplement and feeding stimulant that is to be mixed into sugar syrup and pollen patties. It contains whole plant polyphenols known for their intestinal cleaning properties along with a complex essential oil package to help promote a healthy intestinal tract in the honey bee as well as overall hive health, vigor, productivity and cleanliness.

Benefits: Feeding stimulant, antibacterial for bees and hive components, calms bees when sprayed on them, queen acceptance, combining weak hives and swarms, encourages hygienic behavior.

M01926 - 500 ml, Ship wt. 2 lbs. \$49.95

M01927 - 1 liter, Ship wt. 3 lbs. \$89.95

Honey-B-Healthy

Honey-B-Healthy® was developed in 1995 by a commercial beekeeper. Rich in specially processed essential oils, many large commercial beekeepers use it to fortify colony health and build resistance to the problems prevalent in today's apiaries. Easy to administer by either feeding or the dousing method. Honey-B-Healthy® can be added to a spray and used in place of smoke. Skilled beekeepers find it useful to build up weak colonies and when combining colonies.

M01909 - 16 oz., Ship wt. 2 lbs. \$29.95

 COMMERCIAL
 BEEKEEPERS.**

Vitamin-B-Healthy™

VITAMIN B HEALTHY™: used as a feeding supplement. Can be used alone in syrups, protein patties and along with Honey-B-Healthy® and Amino-B-Booster® to help strengthen colonies weakened from disease, pesticides and pollen stress. Helps provide needed nutrients vital for bee health and helps build strong healthy colonies for maximum honey production and pollination. Can also be used to help build up weak, over-winterized colonies, packages, nucs and swarms. Especially beneficial when bees are producing brood and available pollen sources are limited in quantity and/or the pollen is lacking essential vital nutrients causing dying yellowing (snot) brood and dwindling colonies.

16 oz. Vitamin-B-Healthy
 Ship wt. 2 lbs.
M01939 \$29.95

Honey-B-Healthy® Super Plus

HONEY-B-HEALTHY® Super Plus: is a special essential oil emulsion and when used with Honey-B-Healthy®, Amino-B Healthy® and/or Vitamin-B Healthy™, produces a synergistic (amplified) effect. When used alone, Super Plus has been shown to help keep hives cleaner while improving overall colony health. We have observed that, when combined with any combination of other Honey-B-Healthy® products, Super Plus will accelerate consumption of the feeding mix. While any of our products can be used by themselves, we do advise that Amino-B Booster® be combined with Original Honey-B-Healthy or Honey-B-Healthy® Super Plus to help keep this liquid protein stable. (Amino-B Booster® provides the protein amino acids the bees need). Vitamin B Healthy™ provides the bees with needed vitamins and minerals. All of our products are made of food grade ingredients in an FDA registered food manufacturing facility. However, they are not intended for human consumption.

M01937 \$29.95
1 Gallon Honey-B-Healthy Super Plus
 Ship wt. 12 lbs.
M01938 \$144.95

Amino-B Booster

Protein Benefits:

- Stimulates brood rearing when there is no natural pollen or nectar
- Simulates a nectar flow and pollen bloom when using 1:1 sugar syrup with HBH plus protein
- Provides all vital amino acids, plus 9 more
- Adds many health benefits especially with the HBH; larger, more robust and hardy bees
- Reinforces worn out stored pollen for late winter brood rearing
- When fed in sugar water with HBH, stimulates rapid build-up of nucs, swarms, package bees and weak colonies
- Can be used to help produce high quality queens by providing protein for royal jelly
- Can be used as a "Protein drench" when bees take pollen substitutes very slowly; just spray or drizzle the HBH-Protein into the cluster area; bees will clean it up, store it and use it

Directions: Use 1 tbsp. (15 ml) to 3 tbsp. (45 ml) in a quart or liter of sugar water along with 1 tsp. (5 ml) Honey-B-Healthy® Feeding Stimulant with essential oils as a preservative. Best fed in inverted jars on top of the colony.

Have you considered the quality of your honey bees' nutrition and gut health?

Feeding high quality pollen substitute to your bees is imperative for honey bee health. Natural pollen contains many essential nutritional elements to include beneficial probiotic bacteria. Dadant AP23 - Microbials pollen substitute is fortified with probiotics to create an optimal gut environment resulting in bees' intestinal well-being.

**AP23
Microbials**

M00159 10 hive, Ship wt. 4.4 lbs. \$54.95

Optimal nutrition and beneficial microbials keep your bees healthy and happy!

BroodDFM

BroodDFM is a beneficial probiotic supplement for honey bees. Total health starts with a stable gut. Supplementing your honey bees with BroodDFM provides multitude of benefits such as help in digestion of pollen, gut well-being, and a more responsive immune system. Probiotics, also known as Direct Fed Microbials (DFM) are live microbial food supplements that benefit the host insect by improving its intestinal microbial balance.

AP23[®]

PATTIES WITH
HONEY-B-HEALTHY

BEST BEE NUTRITION ON THE MARKET

At Dadant & Sons we strive to bring you the best pollen substitutes available. After 4 years of working with two of the best nutritionists in the world, we are excited to bring you AP23[®]. AP23[®] stands for artificial pollen and is the 23rd formulation to be developed and tested to date. It is formulated to deliver all of the currently known nutritional needs of the honey bee, with optimal balance of nutrient levels, in a highly palatable blend of specifically selected ingredients. If you have tried the other pollen substitutes on the market you owe it to yourself to try the best. Available in both dry and patty form.

AP23[®] is a high protein feed developed for all levels of beekeepers. It helps maintain colony strength by boosting populations, which result in better crop pollination and honey crops.

Guaranteed Analysis

Crude Protein, min.	47%
Crude Fat, min.	3.5%

AP23 VS Competition:

1. Consumption rates are 2-3 times greater than all other pollen subs in our trials.
2. Optimal particle size for better digestibility. Digestibility estimated at 98+%.
3. All ingredients are from single manufacturing sources with known production parameters for improved consumption and digestibility.
4. Specific proteins used are isolated for purity – this means reduced indigestible sugars and other naturally occurring compounds that the bees cannot utilize.
5. Developed using computerized formulation program and based on specific nutrient needs of honey bees.
6. Formulated with bees preferred nutritional ingredients – based on 4 years of research with a wide variety of test diets.
7. Feed is consumed and stored by the bees. No signs of wasted feed on bottom boards or being drug out of hives as seen in other commercially available pollen subs in our trials.
8. Increase in certain amino acids help increase consumption.
9. Natural antioxidants and natural flavors.
10. Certain ingredients are added that may help optimum gut / bee health.
11. Repeat purchases by commercial beekeepers who report improved brood production and health.

AP23 WINTER PATTIES & BROOD BUILDER

Dadant was the first to bring you the winter patty and continues to manufacture the best feeds available for winter and spring build up. Our winter patties are available in 10 lb and 40 lb boxes. When Gabe first started playing around with the idea for a winter feed he knew the bees still needed a small amount of protein. At 4% protein and 96% carbohydrates this became the perfect complete winter honey bee feed and after two successful years overwintering hives running light on food stores, Dadant thought he had to share this with the rest of the beekeeping community. From the very start they have been a very popular item and we have been told time and time again that without them many hives would have succumbed to the harshness of winter.

AVAILABLE IN PATTY OR DRY FORMULA

DRY FORMULATED FOR OUTDOOR DRY FEEDING

If you live in some parts of California, the southwest or southern tier of the U.S., Brood Builder may be your answer to late winter or early spring outdoor dry feeding stimulation. If your bees can fly early in the year and collect Brood Builder, you can increase colony production.

Brood Builder must be protected from direct moisture such as rain, dew, fog and other inclement weather. Can be fed on platforms or trays directly in the bee yard. Honey bees collect Brood Builder because it is so close to pollen in nutritional value. Honey bees collect Brood Builder naturally, just as they would "real pollen."

Directions for Use: Feed as is from the package on platforms or trays directly in the bee yard. Must be protected from direct moisture, such as rain, dew, fog and other inclement weather. Fill feeders often.

WET MOIST PATTY FORMULA

Brood builder is a great feed to give your hive the boost it needs to increase the brood population. Mix with sugar syrup or fructose until you reach a cookie dough consistency then sandwich between two sheets of wax paper. Feed in-between brood boxes if running doubles and on top of top bars if running singles. Additional sugar can be added for faster consumption. If small hive beetles are a problem feed ¼ to ½ lb patties and reapply as needed. Store extra patties in your deep freeze.

PERFORATED FOR QUICK BEE ACCESS

READILY BEE ACCEPTED

Diseases, Parasitic Bee Mites and Preventive Management

The number of Parasitic Bee Mites and diseases affecting honey bees is not large. Of these, only a few are commonly serious enough to cause severe colony and financial losses to beekeepers.

However, in any consideration of bee disease, adopt a preventive attitude toward the treatment and management of bees. Accept the fact that disease can be costly in causing some degree in loss of honey crop, in diminished service as pollinating agents, in the cost of medications and labor expended for treatment and loss incurred in replacement of equipment and bees.

The Parasitic Bee Mites that have the most economic impact on beekeepers are the Honey Bee Tracheal Mite (*Acarapis woodi*) which lives within the breathing tubes of the honey bee and the large Varroa (*Varroa destructor*) which is an external parasite which feeds on the hemolymph or blood of older larvae and pupae and adult honey bees.

Most diseases affect the honey bee in the larval stage of its development. American and European foulbrood are the two most common. AFB is the most virulent and destructive of the two. Chalkbrood and sacbrood less frequently cause extensive losses.

Occurring nationwide, nosema is the major adult bee disease and is probably responsible for a greater loss of honey crops than any other disease. Its intensity fluctuates from place to place, year to year, and from season to season within a year. The peak level of infection shortens lives of the workers and reduces their ability to feed larvae during brood rearing.

Bee diseases have no physiological effect on people handling bees and equipment; eating honey, pollen, or comb from an infected colony; or using beeswax or beeswax products.

Suggestions for Preventive Management

Apiary locations, large or small, should be carefully selected. If possible, avoid a low, damp spot where puddles of water will stand. Diseases can be spread by bees getting water from such pools, which may contain feces from infected bees or pieces of dead larvae and bits of comb from sick colonies. A source of running water nearby is preferred. Low spots may also be comparatively stagnant as far as air movement is concerned. The humidity of the area builds up during the cool periods of spring and fall. Too much humidity also contributes to poor wintering.

Light shade (or no shade) is generally preferable to a heavy dense shaded location which remains damp long after a sunny spot has dried out. The bees will not fly as early in the morning, as late in the evening, nor as well on cool days if they are setting in a dense shade.

Hives should be arranged within the apiary to keep drifting of bees from one colony to another at a minimum. Keep hives as far apart as practical. Placing them in a random manner is preferable, even though they may not look as neat as when in a straight line, where each one is exactly so far from the next.

Placing hives beside small bushes or such will help bees mark the location of their hive. Natural markers will also

make it easier for any supersedure virgins to locate their respective hives when returning from mating flights, lessening the number of queenless colonies.

A hive stand raises the hive off the ground and serves two main purposes. First, the bottom of the hive is less likely to rot or be eaten by termites. Even painted bottoms will need replacing more frequently when allowed to rest directly on the ground. Secondly, from the disease viewpoint, a wet bottom board is likely to be an “incubator” for the development of causative organisms. Keeping the bottom clear of wax scales and other debris, also helps reduce the buildup of disease.

A 3/4” or 1” auger hole bored near the hand hold on the front of the hive will make a top entrance for the bees which will facilitate air circulation within the hive, reducing the buildup of humidity throughout the brood area.

Since honey is a bee disease-carrying medium for spores, etc., it should not be fed to any colonies unless you are absolutely certain the hive from which it came was free of disease. Honey purchased on the open market should never be fed to bees. There is no way of knowing what diseases you are buying in it.

Prolific queens, with a high percentage of egg hatchability so that every comb is filled solid with brood, are essential to maintaining strong colonies. Such colonies are less likely to become weak, rundown, and in turn, susceptible to diseases.

Transferring combs between colonies should be kept to a minimum. The same is true of shaking bees from one colony for boosting the weak or starting new ones. Be careful not to let honey from broken burr-combs drip on the ground when moving supers, etc. Not only is it possible to spread disease in this way, but it is a good way to get robbing started at times.

When you know the colonies are free of disease, moving combs of bees and brood is a good method of reducing the population of a crowded hive and building up a weaker one. Doing this with combs from newly purchased colonies is risky.

Wintering only healthy, strong colonies increases the probability of survival in good shape. Should a disease-weakened colony die before spring, whatever honey is remaining often will be robbed by other colonies—usually the strongest ones. They, in turn, will probably become infected.

MEDICATION GENERAL USAGE

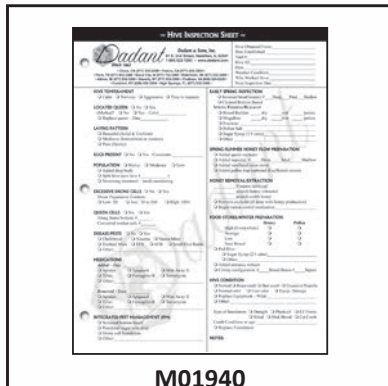

The following is offered as a guideline for medication usage. Be sure to follow label directions in your treatment program.

For the beginning beekeeper, choosing the right medications and knowing when to use them can be tricky. Following is a chart we have devised to simplify and explain these treatments.

medication to use, call your nearest Dadant branch and they will point you in the right direction. We also suggest ordering your medications early so you will be prepared when it comes time to apply.

If you ever have any questions in regards to what type of

MEDICATIONS/USAGE	LENGTH OF TREATMENT	METHOD OF APPLICATION	TIME OF YEAR TO APPLY
Apivar <i>Varroa</i> see pg. 71	42 days	1 strip for every 4-5 frames. Works by contact only. Place in high bee activity areas.	Normally used as fall treatment. Cannot be used with honey supers on.
Apiguard <i>Varroa</i> (Also benefits in the control of Tracheal mites) see pg. 72	Two treatments: 1st: 12-14 days 2nd: 2-4 weeks	Place delivery tray on top of top bar frames. A 1/4" space is needed. Close off screened bottoms and vent holes.	Should be applied during the fall, unless infestation is severe. Temperatures 60°F-105°F. Don't apply when honey supers are on.
Apistan <i>Varroa</i> see pg. 73	42-56 days	1 strip per 5 frames of bees.	When temperatures are above 50°F, generally Spring and Fall.
Formic Pro <i>Varroa</i> see pg. 73	14 days	Apply two strips near the edges of the brood box.	14 days. Daytime temperatures must be 50-85°F.
Mite Away Quick Strips <i>Varroa</i> see pg. 73	7 days	Apply two strips near the edges of the brood box.	7 days. Daytime temperatures must be 50-85°F.
Tetra-B Mix/ Oxytetracycline <i>Foulbrood</i> see pg. 78	Three treatments 4-5 day intervals	Sprinkle recommended dosage around edges of brood box on top bars of frames. Once a week for 3 weeks.	Treat Spring and Fall.
Oxalic Acid <i>Varroa</i> see pg. 74	1 Treatment - One minute per hive	Use drenching or vaporizer methods.	Most effective early Spring or late Fall when there is little to no brood in the hive
Paramoth <i>Wax Moth</i> see pg. 79	3-4 weeks	6 Tbsp. for 15 supers, duct tape all openings making as air tight as possible. Reapply crystals as needed. Air out supers prior to placing on hive 1-2 weeks.	Apply as needed, particularly in warm weather.

Hive Inspection Sheet Notepad

Hive Inspection Sheets help to record hive activity, requeening, treatments, feeding, honey storage, honey extraction, and the condition of the hive. The notepad is made up of 25 sheets with pre-drilled holes to fit into a 3-ring binder. Ship wt. 1 lb. ea.

VARROA MITE MEDICATION

*The
Safe Strip*

Véto-pharma
Committed to apiculture

AMITRAZ CONTROLLED-RELEASE TECHNOLOGY

1. Amitraz is a sub-lethal miticide that paralyzes Varroa mites. Varroa cannot keep holding on to the bees and falls to the bottom of the hive, leading to their starvation.
2. Plastic polymer strip: specially designed to ensure a regular release of amitraz on the surface of the strip after its placement in the hive. The polymer strip was chosen for its rigidity and its ability to continuously release the active ingredient over a minimum six-week period.

HOW IT WORKS IN THE COLONY

Apivar works by contact: the active ingredient is delivered continuously over time. As bees walk on the strip's surface they pick up molecules of the active ingredient and then distribute them throughout the colony.

VARROA: WAKE UP TO THE NATURAL EFFICACY OF APIGUARD®

A slow release thymol gel, a new and effective treatment

- A natural and non-toxic treatment
- Through thousands of treatments, efficacy rates ranged from 85% to 95%, with an overall average of 93%.
- It respects both the hive products and the consumer
- Encourages the hygienic behavior of the honey bee, preventing a number of related problems
- Resistance is controlled and unlikely to occur with Apiguard
- Ease of use: 2 x 50 gm treatment trays per hive, with an interval of 14 days, in summer just after the honey flow
- Best results occur when bees are active and maximum daily temperatures are between 60°F and 105°F.
- Though registered as a Varroa treatment, Apiguard has been proven to effectively treat Tracheal mites as well.

To Use Apiguard

Place the dosing tray or pad centrally on the top of the brood frames gel side up. Be sure to allow at least 1/4" of spacing between the top of the tray and the cover using spacer boards or empty supers as needed. Apply the second dose 14 days after the first. Screened bottom boards should be closed while Apiguard is being applied.

Formic Pro*

Formic Pro™ is the next generation in formic acid treatments for mites. Made of all natural materials, this product can be used during the honey flow. Unlike Mite Away Quick Strips, Formic Pro™ has a longer shelf life of 24 months and no temperature requirements for storage. Daytime temperatures still must be between 50° F - 84° F (10° C - 29° C) when used.

Strips are to be placed across the top bars between brood boxes or on top of a single deep hive. Be sure to wear the recommended safety equipment for acid.

Treatment Options:

- 14 day Treatment: 2 strips for 14 days.
- 20 day Treatment: 1st strip for 10 days remove and replace with 2nd strip for an additional 10 days.

May not be available at all locations.

VARROA MITE MEDICATION

Oxalika Vaporizer

From our friends in Italy come the The Oxalika Vaporizer. It runs on a 12 volt battery and comes complete with two dosing spoons. This sublimator is the only one of its kind with a device to control the temperature of the heating cup which will increase efficacy that is lost by many other vaporizers on the market that run at higher temperatures. Treatment time is 1 minute 30 seconds. No need for cooldown between treatments. Made in Italy.

M01760 Oxalika Vaporizer \$149.95

VarroVap Vaporizer

We are pleased to offer the VarroVap vaporizer. The VarroVap cannot be dunked in water. Wash with a wet rag or sponge in-between each application. Runs on a 12 volt battery. Ship wt. 2 lbs. ea.

M01780 VarroVap \$129.95

Half Mask Respirator Kit

The 8000 Series Respirator conforms to the contours of your face. It seals comfortably and remains sealed, even while talking. Plus, the seal is extra-wide, so it fits more facial types. No inhalation valves to stock. No installation. Less maintenance, less parts. Cartridges snap-in, which eliminates mistreading. Plus, the weight is distributed evenly, without pressure points. The low profile provides a larger field of vision than any other respirator and makes it easier to wear safety eyewear. Be sure to review all fitting instructions and safety guidelines in the user manual prior to using this product. 2 cartridge filters included.

IPM MANAGEMENT

Jōnz Hygienic Bottom Board Assembled & Painted

The Jōnz Hygienic Bottom Board™ (HBB) (patent pending) helps control Small Hive Beetles without significant loss of pollen from the hive. Bees often drop pollen balls when working in the hive. Full-screened bottom boards lose all this dropped pollen through the screen. That is why oil trays beneath full-screened bottom boards quickly turn into sludge. Field tests show that Small Hive Beetles instinctively try to hide in the HBB's recessed screened receptacles, only to fall through the screens and into the HBB's shallow oil tray. Very little dropped pollen ends up in the tray—only dead beetles and small amounts of hive debris pushed into the receptacles by the hygienic bees. With more pollen available, the hive supports more brood and becomes a stronger, healthier hive. The HBB's rear door also provides quick and easy access to the oil tray without disturbing the bees. Fully assembled and painted.

Beetles trapped using a sheet of Beetle Bee-Gone

M01545

Beetle Bee-Gone

Beetle Bee Gone sheets are an all-natural, chemical free way to trap small hive beetles. Place one to two sheets per brood chamber where beetles congregate. Re-apply sheets the next time working these infested colonies and watch them disappear naturally. 48 sheets.

M01545 Beetle Bee-Gone, Ship wt. 1 lb. ea. **\$8.50**

West Small Hive Beetle Trap

The 1st Small Hive Beetle Trap That Works!

The West SHB Trap was designed to sit on the bottom board just where SHB naturally like to hide. The trap consists of a tray that you partially fill with a small amount of vegetable oil and a specially designed lid that is covered with almost 300 small slots. The SHB, in looking for a place to hide from the honey bees trying to catch them, head for the slots as an escape route, which is a dead end that leads directly to the tray filled with thick non-toxic vegetable oil. The SHB falls into the vegetable oil, are coated with it, suffocate, and die. It's just that simple!

VETERINARY FEED DIRECTIVE (VFD) LAWS

On Jan. 1st 2017 the Veterinary Feed Directive went into effect. All customers must have a VFD from their veterinarian to be able to purchase Tetra Bee Mix for the treatment or prevention of American and European Foulbrood. A copy of the VFD must be filled out and signed by your veterinarian for the number of colonies you are wishing to treat. You will then send a copy of the VFD to your local Dadant Branch. Once Dadant is in receipt of the VFD, they can send the antibiotic to you. The VFD form can be sent via fax, mail, or email to your local Dadant office.

To make things go as smoothly as possible we suggest building a relationship with your local veterinarian. If they themselves are not beekeepers, you should invite them to your apiary and show them the ins and outs of the beehive. You will want to teach them that beekeepers can use Oxytetracycline in two ways. One of them is being proactive. This beekeeper uses oxytetracycline before a sign of disease is present. It is also used reactively or by treating when disease is found within the hive. You will want to teach them about the times of the year that it is applied and how many applications it takes when treating. Most who treat proactively will treat in the spring and the fall. Others will treat only when the disease is present. Treatment time frames are 3 – 200MG doses at 4-5 day intervals. A VFD can be written for a period of up to 6 months by your local veterinarian.

If you have any questions regarding VFD laws that we didn't answer above, contact your local Dadant office and our sales staff will do the best they can to answer your questions or put you in contact with those who can. There is a chance that this will be appealed and done away with for small animals which would include honey bees. Should that happen, we will make an announcement via email and on our website at www.dadant.com.

Contains Nonbinding Recommendations

APPENDIX A: BLANK VFD IN THE RECOMMENDED COMMON FORMAT

Veterinary Feed Directive

Veterinarian: Dr. John Doe Client: Dadant Americas
 Address: _____ Address: _____
 (business or home)
 Phone: _____ Phone: _____

 Premises: 51 South 2nd Street Hamilton IL 62341
 Other Identification (e.g., age, weight) (optional): _____
 Special Instructions (if any): _____

Affirmation of Intent (for combination VFD Drugs) (check one box)*:
 (*For VFD drugs for which there are no approved VFD combinations, only the first affirmation statement should be included on the VFD)

This VFD only authorizes the use of the VFD drug(s) cited in this order and is not intended to authorize the use of such drug(s) in combination with any other animal drugs.

This VFD authorizes the use of the VFD drug(s) cited in this order in the following FDA-approved, conditionally approved, or indexed combination(s) in medicated feed that contains the VFD drug(s) as a component:

Drug(s)	Drug Level(s) and any Special Instructions
<u>Oxytetracycline</u>	<u>200 mg/ colony 2-4 treatments each</u>

This VFD authorizes the use of the VFD drug(s) cited in this order in any FDA-approved, conditionally approved, or indexed combination(s) in medicated feed that contains the VFD drug(s) as a component

◀ Withdrawal Time (if any): This VFD Feed must be withdrawn _____ days prior to slaughter ▶

VFD Date of Issuance: 3/15/16 (Month/Day/Year) VFD Expiration Date: 9/15/16 (Month/Day/Year) (As specified in the approval; cannot exceed 6 months after issuance)

Veterinarian's Signature: Dr. John Doe

All parties must retain a copy of this VFD for 2 years after the date of issuance. 21 CFR 558.6(a)(4)

FOULBROOD

DISEASE PREVENTION FOR HEALTHY BEES

Tetra-B Mix*

Tetra-B Mix is a ready-to-feed mixture containing the antibiotic oxytetracycline. Recommended as an aid in the control of American and European foulbrood. May be used for fall treatment of colonies prior to winter or for the spring treatment of overwintered colonies. Spread over the top bars of the frames in each section of the brood nest. All use should stop at least 6 weeks prior to a surplus honeyflow.

— Active Ingredient - Oxytetracycline —

REMOVING BEES FROM SUPERS FILLED WITH HONEY

Non-Chemical Method

Using Bee Escapes — 2 Styles

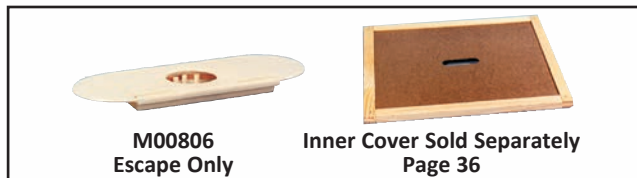

Bee Escapes are one-way doors which let the bees leave the supers but not return. The escape is placed beneath the supers of honey to be removed. (When removing more than one super of honey from an individual hive, we recommend placing an empty shallow super under the escape board to allow more space.) Supers are usually free of bees within 2 - 24 hours and no chemicals are used.

Bee Escape Board

The Triangle escape board works like a bee escape except the bees are able to leave the super much quicker. Face the triangle covered with hardware cloth towards the bottom of the hive. Bees will exit through escapes on the side of the triangle and can't figure out how to get back in. Ship wt. 6 lbs. ea.

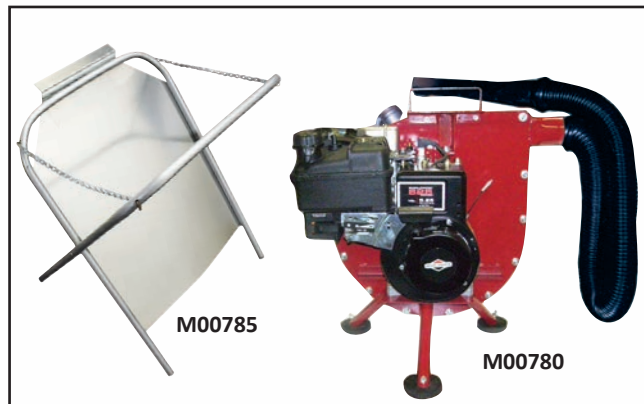

- M00940 - 10-frame \$15.75
- M009408 - 8-frame \$15.75

Standard Bee Escape And Inner Cover

This bee escape is placed in the center opening of an inner cover (B15201) described on page 36. Ship wt. 2 ozs. ea.

- M00806 \$3.25
- 12+, ea. \$2.75

- 3½ hp Briggs and Stratton gasoline engine

HONEY HOUSE PLAN AND LIQUIDATOR

Liquidator—4 Units in 1 "The Hobbyist's Dream"

- Uncapping/Cappings Drain Tank**
- Wax Melter**
- 1 Can Liquifier (60# Container)**
- 175# Bottling Tank**

Components:

- 1 - 14" diameter, 24" deep, 24 gauge, Type 304 food-grade MIG welded stainless steel tank with two welded fittings—bottom drain.
- 1 - 1700 watt—120 volt immersion heater
- 1 - Wooden frame uncapping bar
- 1 - Heavy stainless steel support for 60# containers
- 1 - 1" bottling ball valve
- 1 - 14" diameter screen
- 1 - 14 1/2" stainless steel spun cover

Write or Call For Brochure With Full Operational Details

The Liquidator and an extractor are the only equipment necessary to process and package your entire honey and wax crop. The Liquidator, a great companion for your Junior Bench, Little Wonder or Ranger extractor, was developed specifically for hobbyist beekeepers. Save time, labor and mess with the Liquidator. Ship wt. 45 lbs. ea.

Cappings Baskets

Excellent Cappings Drainage

Dadant Cappings Baskets—Designed for use in the cappings tank. 17 1/2" x 17" Type 304, 22 gauge stainless steel construction. Uncap directly into the baskets. Perforated aluminum bottom allows good cappings drainage. Sturdy construction allows basket full of drained cappings to be lifted from the tank. Pair.

- ⊗ **M00371** Cappings Baskets (per pair)
Ship wt. 17 lbs. \$189.95

Cappings Spinner

Capping Spinners—Great for the serious but smaller operations. Separate your honey and wax cappings with ease! The results are more honey to sell and dry, light fluffy wax cappings ready for melting into bricks. This machine is a must for beekeepers operating 100 hives or less. The 20 gauge stainless steel tank is 20" in diameter and 32" high. The bottom is die formed, and conical for ease of side draining. The removable cappings basket is constructed from 18 gauge perforated stainless steel and laser cut to perfection. Complete with legs, this machine ships at a weight of 150 lbs. in a heavy duty carton. **Ships Freight Only**

Solar Wax Melter

Solar Wax Melter—The perfect answer for melting up those burr combs and small amounts of wax. Melter is 19" x 24". Works best when painted black. Comes unassembled. Inexpensive polyethylene film for top to be purchased locally.

M00501 Solar Wax Melter,
Ship wt. 25 lbs. ea. **\$139.95**

M00501

Deluxe Solar Powered Wax Melter

The **ALL NEW Deluxe Solar Powered Wax Melter** is an affordable, high performance melter that uses the power of the sun to melt valuable wax with no cost to operate. It is capable of reaching and maintaining temperatures as much as 50° F above melting temperature without harmful UV ray exposure. Warm-up takes about 30 minutes and in most locations, melting can be achieved in 6-7 hours on a sunny day. Even on partly cloudy days, extended periods of melting are possible.

The Deluxe Solar Powered Wax Melter is constructed of 7-11 layer hardwood plywood which is painted black in the melting areas and polycrylic finish sealed on the exterior. It is assembled with waterproof, high strength urethane adhesive and power driven nails. Solar transfer is accomplished via multi-wall structured polycarbonate, 10mm thick sheet surrounded by a sealed wooden frame. A sliding, captive front door allows for exchanging of catch pans during the melting cycle without having to raise the main cover.

The melting and collecting areas will accommodate your pans, screen and filter cloths up to 18" x 12" x 5 1/2" for the melting pan and up to 11" x 5" x 3" for the collecting pan. Use of aluminum pans typically sold in grocery stores and hardware outlets is recommended. Loading is easy since the cover can be completely removed providing total access to the melting area. The Deluxe Solar Powered Wax Melter can be shipped anywhere in the US or Canada.

Dadant's FINE FAMILY OF MELTERS

Dadant's Water Jacketed Mini Melter

Uncap directly into the unit

Draw beautiful wax from one outlet

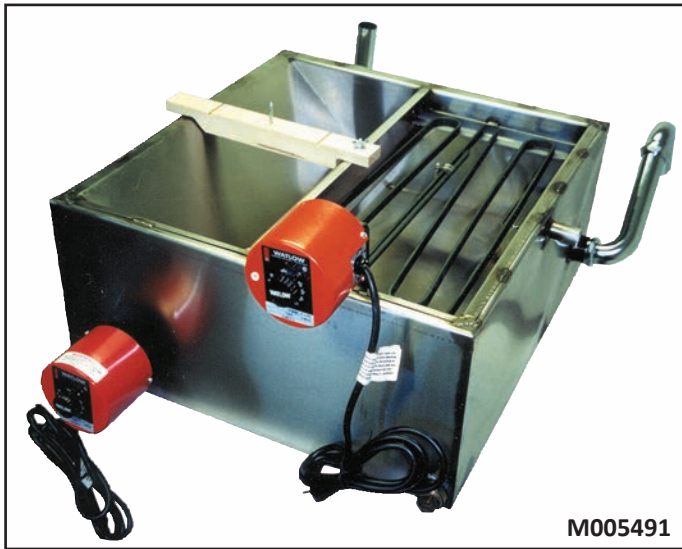

Excellent quality honey from another outlet

Wax Melting Grid 1800 watt—120 volt

1700 watt—120 volt Immersion Heater for Water

Both Heaters Are Thermostatically Controlled

The water jacket speeds the wax/honey separation process and allows precise control of honey temperature. Cappings from 300 lbs. of honey per hour have been processed with the Dadant Mini Melter. Operating conditions vary; therefore, production rates will vary. Will handle most hand uncapping operations and some smaller volume power uncappers. Comes complete as shown. Please call or write for complete information sheets. Patented.

Electromelt — Optional Slum Rake Shown at Right

Dadant's Water Jacketed Electromelt

A Proven Process

Separate Wax and Honey
in 1 Step While You Uncap

Eliminates Spinners

Saves Time and Money

Optional Slum Rake System

Speeds Processing—Saves Time

Features and Benefits of the Electromelt

- 6900 watt, 240 volt melting grid
- Stainless steel flat heating grid
- Stainless steel tank, 16 gauge
- Stainless steel water jacket
- Works with all uncappers
- Fast start up
- No steam required
- 3 year warranty on electric melting grid

The Electromelt has been proven by commercial beekeepers using all types of uncappers. The unit was designed for and works most efficiently with cappings from uncappers other than the chain flail type. Producers report processing cappings from over two drums of honey per hour when using the rake system with the Electromelt. At the day's end, all honey and wax are processed - no extra hours, no additional jobs to do. Quality wax is in pans, and premium honey is in storage, operating costs are low, as energy losses are minimal. When paying 8¢ per kilowatt hour, operating costs are less than 75¢ per hour. Both the melting grid and water jacket heater are thermostatically controlled for precise control. Call or write for more information.

Dadant Manufactured Honey Extractors

ALL DADANT EXTRACTORS ARE MADE WITH GAUGES OF STEEL HEAVIER THAN OUR COMPETITORS!

The Concept of the Radial Extractor has saved more time and combs for beekeepers than any other invention.

Radial extractors are the quickest, easiest, and most efficient way to extract honey from the comb. Frames are placed in the reel like spokes of a wheel. The reel spins, creating a centrifugal force and honey is thrown from both sides of the comb at once.

6-12 Frame Radial Extractor with Motor

6-12 Frame Radial Extractor—No more hand reversing of frames—uncap, load, extract, and unload. Reel capacity 6 - 9 1/8" deep frames; 12 - 6 1/4" shallow frames. Frame guides provide positive frame placement. Ball bearings top and bottom. Powered by specifically designed direct drive motor with manually controlled electronic speed control. 120 v. operation. All welded 24" dia. 28" tall Type 304, 20 gauge stainless steel tank with inverted coned bottom and 1 1/2" welded fitting. 1 1/2" plastic honey gate w/barbed adapter included. (See diagram at right for construction details).

CONSTRUCTION DETAILS

6- 12-Frame and 20-Frame Extractors

(20-Frame Extractor Shown)

20-Frame Radial Extractor

- 4 Section Reel
- Type 304 Stainless Steel
- 20 Gauge Stainless Steel
- Holds Any Size Frame
- 20 Individual Frame Pockets
- Can Hold Up to 36 Frames
- 30" Diameter 28" High

The ideal choice for a growing extracting operation. From a few colonies to several hundred, the 20-frame radial is excellent. Comes complete with welded drain (2" Female Pipe Thread) with 2" to 1 1/2" reducer bushing. A powerful variable speed direct drive motor powers the unit. It has a cone bottom and is 120 v. operation.

COMMERCIAL FILTERS AND PUMPS

Commercial Honey Filter

Dadant's Commercial Honey Filter is a stainless steel inline honey filter which can completely filter your honey, making it ready for sale at a premium price. The closure mechanism is safer and much easier to use than band clamps. The housings are manufactured with investment cast covers and collars. Strong 3-piece design offers easy access to perforated stainless steel basket and micron – rated filter bag. Filter is 6" in diameter and 15.5" long with 1 1/2" inlet and outlet. Engineered for honey pump flow rates of up to 5 G.P.M. Honey temperature must be 100°F or higher for longer filter bag use. Change filter bags before pressure reaches 40 psi. Filter bags sold separately below.

✘ M00570 Ship wt. 30 lbs. \$624.95

1 1/2" Plastic Gate

Designed Specifically by *Dadant & Sons* for Use With Honey Injection Molded High Strength

M00579

Scissors action for clean cutoff against an O-ring. Adjustable gate tension. 1 1/2" pipe thread for threading into a fitting or use 1 1/2" plastic nut (provided) to install gate directly into hole in tank side. Comes with a versatile plastic barbed adapter for 1 1/2" tubing hookups. Excellent quality. Ship wt. 1 lb. ea.

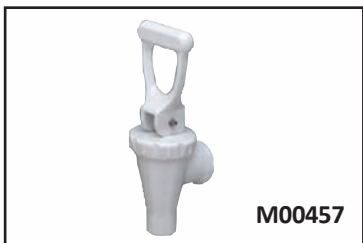

M00579 1 1/2" Gate \$12.95

03-40221

Replacement Thumb Screw for 1 1/2" Plastic Gate

For the M00579 plastic gate. Ship wt. 1 oz. ea.
03-40221 Metal Replacement Thumb Screw \$.85

M00457

Dispensing Valves

M00457 3/4" Dispensing Valve for "thin" liquids, will fit 7 1/2 gallon and 10 1/2 gallon Pantry Tanks. Ship wt. 2 lbs. ea. \$30.80

Can use with (7 1/2 gal. & 10 1/2 gal. Tank) for "thick" liquids or use the following:

M005855 SS Bottling Valve or M00585 1" Brass Filler

Adapter Kit M005854 is required to fit either valves above.

Stainless Steel

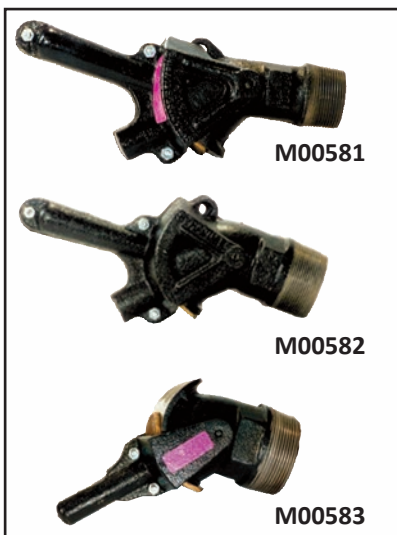

M005855

Honey Bottling Valve—1 Inch

A solid, stainless steel, self closing no-drip valve, 1" threads. Rising plunger valve. Spring close. Can use M005854 adapter kit for use with 7 1/2 and 10 1/2 honey pantry tanks.

M005855 Honey Bottling Valve, Ship wt. 3 lbs. ea. \$137.95

M00585, M005855 will fit tanks with 1" male thread outlet directly with no adapters. Valves can be used with other size outlets, but will require adapters.

M00581

M00582

M00583

Perfection Gates

Perfection Gates are cast iron construction with brass inserted seats, male pipe threads. Used on steel drums but not recommended for use on regular stainless steel honey storage or extractor tanks. Perfection gates will fit steel drums, 16 gauge or heavier metal storage tanks.

M00581 1 1/2" Perfection Gate, Ship wt. 4 lbs. ea. \$83.99
M00582 2" Perfection Gate, Ship wt. 5 lbs. ea. \$89.10
M00583 3" Perfection Gate, Ship wt. 7 lbs. ea. \$142.75

M005854

Offset Handle for Easy Filling

M00585

1" Brass Bottle Filler

Brass Bottle Fillers are ball valves that have been machined on one end to obtain good cutoff. Both on and off lever action. Comes complete with 90° bend. 1" has female pipe threads. Stainless steel movable ball seals against nylon seats to insure very smooth action and long wear. Ship wt. 2 lbs.

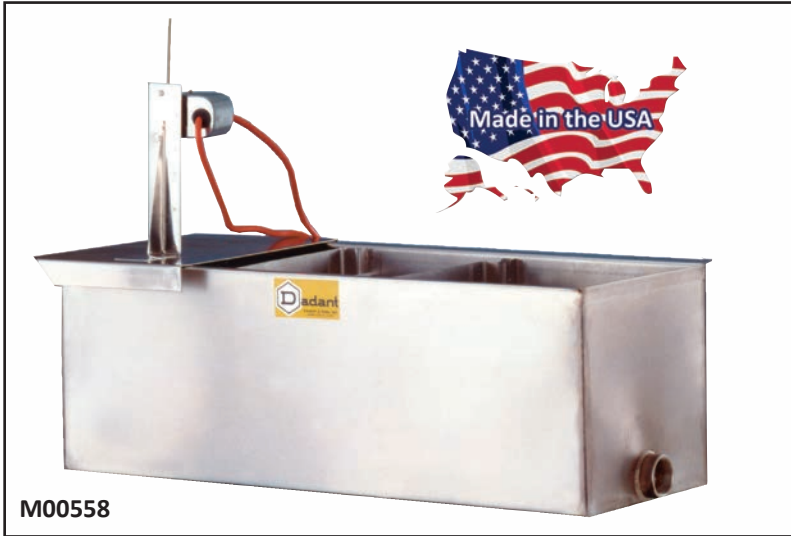

M00585 1" Brass Filler. \$95.95

Adapter Kit

M005854 Adapter Kit for Honey Bottling Valve-M005855. To fit M00455, 10 1/2 gallon Dispensing Tank, available on page 95. M005854 adapter kit will also work with M00456 7 1/2 gallon honey pantry tank. Ship wt. 3 lbs. ea.

M005854 \$16.95

HONEY HARVESTING

M00558

Pump Control-Strainer

15 Gallon—12" x 12" x 32"

Collect honey directly from your extractor, strain out most foreign material, and control your honey pump in one operation. Single tank unit is all MIG welded stainless steel. Comes complete with wired float switch and strainer screens. Comes with Type 304, 20 gauge, stainless steel 1 1/2" female pipe thread welded inlet and outlet fittings.

Ships Freight Only.

✘ M00558 Ship wt. 59 lbs. ea.* \$535.35
* See page 140

M00550

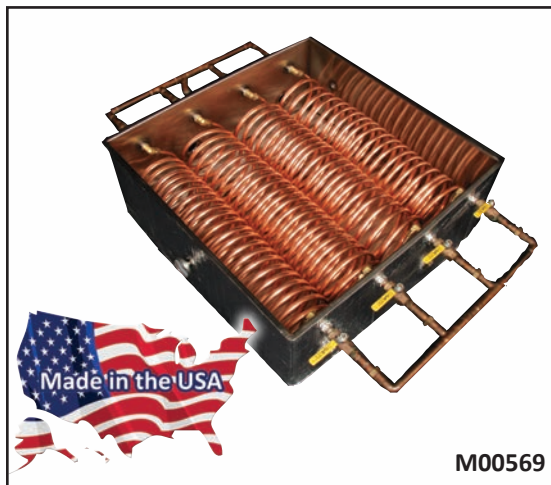

Controller 1

20 Gallon Water Jacketed Clarifier

Double-wall all MIG welded Type 304, 20 gauge, stainless steel construction provides a water jacket around the honey compartment. Two double baffles trap heavy and floating material. Welded tank fittings. 1 1/2" male pipe thread inlet and 1" male pipe outlet. Complete with wired float switch, 1700 watt 120 volt heater, baffling system, and two-piece complete cover. 36 1/4" L x 14 1/4" W x 14 1/4" H.

**Portable Table Top Unit—Self Priming—
All Electric (120 volt) Pack From Any Bulk
Container—Easy To Adjust Fill Quantity**

Fill Master

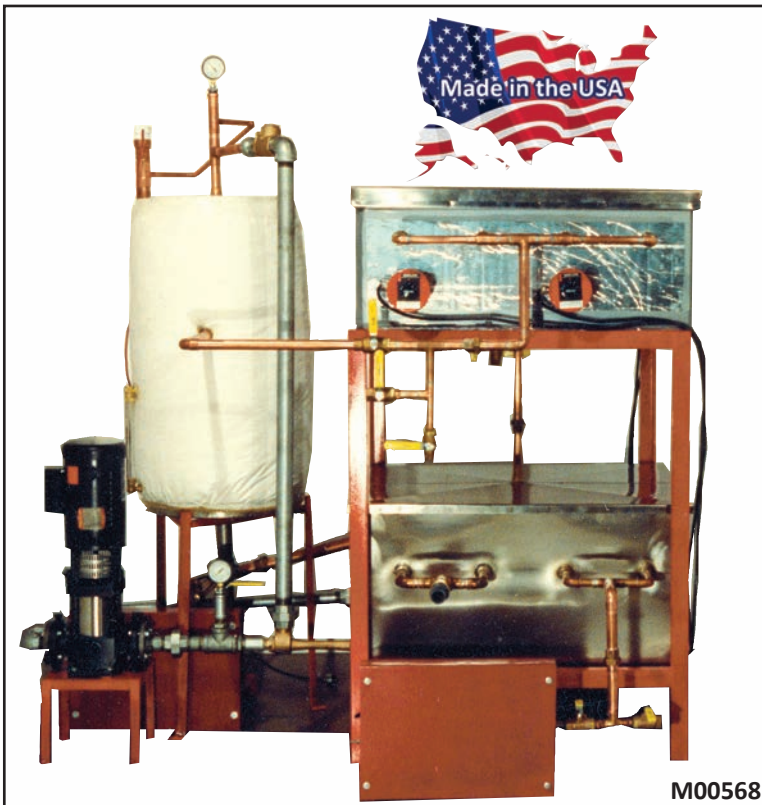

The **Fill Master** is Dadant's answer to many requests for a simple, no drip, easily adjusting, inexpensive, accurate bottle filling machine. As with any bottle filler, the unit works best with warm (110°F) honey. No special bottling tank is required as it is self-priming. You may pack from 60# buckets, storage tanks or anything that holds honey. Adjust fill level from ounces to gallons in seconds. No fill limitations. No air supply needed. A great unit at a low price.

The Stainless Steel Fill Master is made out of Type 304, 20 gauge, stainless steel. Free video—just give us a call. Branch pickup is available.

Not available at all branches

- Removes Moisture—1½ to 2 points of moisture removed from up to 2 barrels of honey per hour
- Slows Crystallization—“Shelf Life”—*The length of time honey is on the shelf before crystallization occurs* can be greatly increased by properly controlled heating. The M00569 Flash Heater is part of the Honey Dryer.
- Inexpensive To Operate
- Fully Controllable
- Low-temperature Processing
- Not Affected By Atmospheric Conditions
- Clarifies Honey—*Beautiful honey comes out even when cloudy honey (due to suspended air and fine wax particles) goes in.*
- Removes Fermentation—*Discovered by accident, but it has worked every time. The first test pumped 19.5% moisture, fermented honey in, and 18% “good” honey came out.*

MULTI PURPOSE—WATER JACKETED TANKS

WATER JACKETED TANKS 10 Gallon Capacity

Comes with 14" stainless steel removable lid. All fittings welded, 1" male pipe thread outlet. No outlet valve supplied. Order your choice from page 97, depending on your application. 14" diameter fill area. 18" diameter x 21" height. 1700 watt, 120 volt immersion heater. Both inner and outer tank are 20 gauge, type 304 stainless steel construction.

Many products require indirect heating to prevent scorching, hot spots or overheating, and to assist bottling, processing or material handling. This tank works like a "double-boiler" and is basically a smaller tank inside a larger tank. The space between the tanks is filled with water and an immersion heater is immersed in the water. In turn, the heated water warms the product that has been placed in the inner tank. This indirect heating is a gentler method of warming and has been found necessary to ease product handling and prevent damage to products such as honey, waxes, soaps, syrups, etc.

GLASS HONEY CONTAINERS

All weights listed for containers are honey weights. Other liquids may vary in weight. For example, a 12 oz. container will hold 12 ozs. of honey, but only 8 ozs. of water.

GLASS SHIPMENTS CANNOT BE INSURED. All glass shipped will be at customer's risk.

3 lb. & 5 lb. Glass Jar with Lid

Each jar makes a great container for honey and some use them exclusively for their payments to the landowner of the property the beekeepers hives are sitting on. It is also known as a yard rent jar. Both take a standard G-70 closure. Lid included.

DADANT PUBLICATIONS

The Hive and the Honey Bee 2015 Edition

M00010
\$54.50

The 2015 edition of *The Hive and the Honey Bee* continues a 162 year tradition started by the father of American beekeeping, the Rev. Lorenzo Lorraine Langstroth. Langstroth entrusted the continuation of this book to his trusted friends Charles Dadant and his son, C.P. Dadant. Over the years "The Bible of American Beekeeping" has been continually updated and enlarged to meet the needs of a growing and changing beekeeping industry. This new edition is 27% larger than the 1992 edition and is composed of 29 chapters written by a staff of 44 beekeeping experts. In addition, it has 660 photos (most of them in 4-color) and 151 drawings, graphs and tables. The 2015 edition is truly a complete beekeeping library in one book. Professionally indexed for easy information searches. Hardcover, 1057 pages. Ship wt. 6 lbs.

American Honey Plants

M00125
\$24.95

Authored by honey plants expert Frank Pellett, this classic book on American honey plants has been reprinted in its entirety. Recognized as the best and most comprehensive book ever written on American honey plants, this volume has been out of print and hard to find for many years. Order your copy now while supplies last! Beekeeping artist Roby Baer has provided a wonderful new color cover that makes this book a true collector's volume. Softcover, 467 pages. Ship wt. 2 lbs.

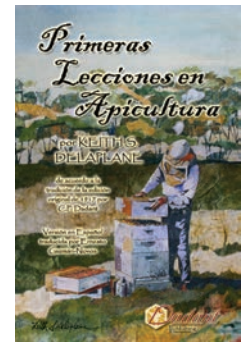

First Lessons In Beekeeping

M00001
\$8.95

M00001S
\$8.95
(Spanish version)

The new *First Lessons in Beekeeping* introduces the prospective beekeeper to the basics of beekeeping through easy-to-understand text and 150 color photos on honey bee biology, beekeeping equipment, management, honey production and processing, as well as disease diagnosis and treatment. In the preface to this book, author Keith Delaplane says of his first book on beekeeping, "Its pages opened to me a golden world of honey bees and beekeeping and guided my stumbling steps that first spring season. My story is but one of thousands who have passed through the door opened by Dadant's little book." That "little book" was the 1968 edition of Charles P. Dadant's 1917 classic *First Lessons in Beekeeping*. Dadant's book and its succeeding editions have been America's first stop for beginning beekeepers for over 90 years. For the latest edition, Delaplane honors the tradition of sticking to the basics, while fully engaging the new realities of beekeeping in the 21st century. Here in this book is everything you need to know to become a successful beginning beekeeper. Also available in Spanish. Softcover, 166 pages. Ship wt. 1 lb.

Outapiaries and Their Management

M00030
\$8.95

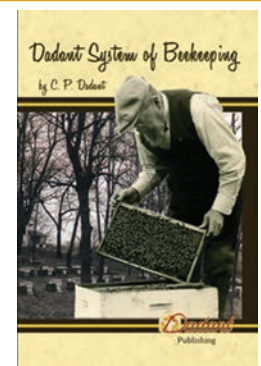

This rare volume written by M.G. Dadant was first printed in 1919 and has been out of print for many years. Now Dadant & Sons has reprinted it in its entirety, along with all of its interesting and historical photographs. This is one of the few books in existence written exclusively on the subject of establishing and managing new beeyards. Its good advice is still relevant today and its historical significance makes it a real collector's item. Softcover, 124 pages. Ship wt. 1 lb.

Dadant System of Beekeeping

M00029
\$8.95

C.P. Dadant's excellent instructional book on his beekeeping methods was popular for many years after it was first published in 1920. Now Dadant & Sons has reprinted it, along with a new cover that features historical photos of C.P. Dadant working his hives, as well as photos of his home beeyard and a personal portrait. This book contains a wealth of practical beekeeping and historical information. Softcover, 115 pages. Ship wt. 1 lb.

Restocking fee of 35% for all pre-approved book returns

Dadant Honey Bee Study Prints

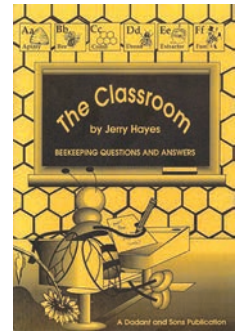

M00020
\$26.95 per set

These 12 beautiful 13" x 18" color enlargements depicting various honey bee behavioral characteristics and beekeeping scenes are excellent for the classroom, bee meetings and exhibits. Ideal for home, office, and honey house display. Printed on the back of each color photo is instructional material—tells what can be observed and learned from the picture, asks questions, gives additional information on the subject, and suggests other sources of information. Ship wt. 2 lbs.

The Classroom — Beekeeping Question & Answers

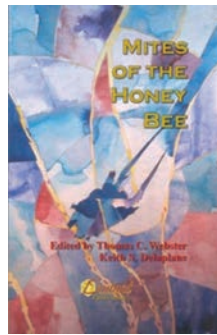

M00069
\$11.95

Jerry Hayes, our Classroom writer for the *American Bee Journal*, has put together a huge selection of the most asked beekeeping questions and answers that have been sent to *The Classroom* over the years. Great for the beginner or seasoned veteran. Book chapters deal with management, bee biology, diseases, parasites and treatment, pesticides, swarming, moving bees, pollination, equipment, honey, propolis, stings, queens and much more! Honey gold softcover. 300 pages with photos. Learning really can be *fun!* Ship wt. 2 lbs.

Mites of the Honey Bee

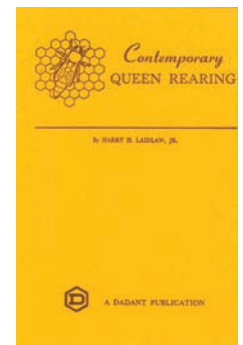

M00095
\$9.95

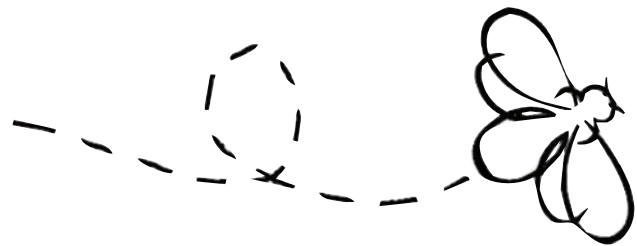

This is a must-have book for any beekeeper who wishes to understand the tracheal and varroa mite problems in the United States and the potential for control of these two serious honey bee pests. Twenty-seven expert authors have come together to write 18 concise chapters on *Mites of the Honey Bee*. This 300-page hardcover book is amply illustrated with photos, drawings and graphs to augment the text. By Thomas C. Webster and Keith S. Delaplane. Ship wt. 3 lbs.

Contemporary Queen Rearing

M00065
\$12.50

According to the late author, Dr. Laidlaw, "*Contemporary Queen Rearing* is still the best book I have written on practical queen rearing." Information on producing virgin queens, mating the queen, use of queens, package bee production, stock maintenance and much more useful information. Softcover, 199 pages. Ship wt. 1 lb.

Mating Biology of Honey Bees (*Apis mellifera*)

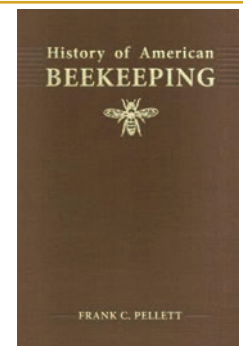

M02311
\$32.00

Authors Gudrun Koeniger, Nikolaus Koeniger, Jamie Ellis, and Lawrence Connor teamed up to write this unique book on the mating biology of honey bees. This hardcover book is amply illustrated with color photos. Bee expert Dr. Marla Spivak at the University of Minnesota says, "Here is a book that allows you to brush up on all the mind-bending details about honey bee mating biology...Bee sex is complex and beautiful and fortunately, there are still mysteries for future researchers to unravel." Hardcover, 155 pages. Ship wt. 2 lbs.

History of American Beekeeping

M00072
\$35.00

This is one of the few comprehensive books ever written on the history of American beekeeping. Authored by the late *American Bee Journal* editor, Frank C. Pellett, in 1938 this once very rare book has been reprinted in its entirety, along with its original historical photos. This is a fascinating and valuable historical document that details the rise of American beekeeping and the beekeeping pioneers who made it happen. Hardcover, 213 pages. Ship wt. 1 lb.

Restocking fee of 35% for all pre-approved book returns

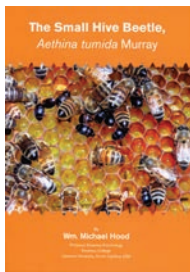

1-888-922-1293

INCREASE ENJOYMENT AND PROFIT WITH KNOWLEDGE

The Small Hive Beetle

Aethina tumida Murray

M02316
\$23.00

The importance of the role played by honey bee pests in the world is becoming more recognized each year, not only because of attention given to the pest species, such as the varroa mite and small hive beetle, but also because of the increasing realization that honey bees are extremely valuable to nature and humanity. The author, Wm. Michael Hood, is Professor Emeritus of Entomology, Emeritus College, Clemson University, South Carolina, USA Softcover, 142 pages. Ship wt. 1 lb.

Simple Smart Beekeeping

M01729
\$25.00

Author Kirsten Traynor does a wonderful job in providing a beginner's beekeeping book "to help streamline your beekeeping success." Simple, Smart Beekeeping will guide you through your early years of beekeeping, helping you recognize what is happening in your hive. Short informative chapters cut through all the jargon and tell you just what you need to know. Wonderfully illustrated with 190 photos shot in the field. Softcover, 180 pages. Ship wt. 1 lb.

Honey Bee Biology and Beekeeping

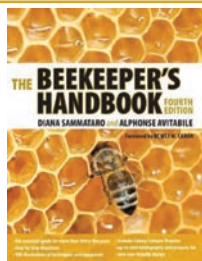

M00073
\$55.00

The new edition of this excellent beekeeping textbook has been extensively revised and updated by author Dewey M. Caron with the help of Lawrence John Connor. Since its original release in 1999, Honey Bee Biology and Beekeeping has become a widely accepted beekeeping textbook. It concentrates on the "why", "how" and "when" of beekeeping, while explaining bee and beekeeping basics in a manner meaningful to people who lack an intensive biology background. Nicely illustrated with many color photographs. Hardcover, 368 pages. Ship wt. 3 lbs.

The Beekeeper's Handbook

M00094
\$27.50

Written by Diana Sammataro and Alphonse Avitabile, this 190 page beekeeping instructional manual has been hailed by many as one of the best beginner's books written in recent years. A glossary and bibliography are also provided suggesting more detailed information on the topics discussed. Softcover. Fourth edition. Ship wt. 2 lbs.

BEEKEEPING FOR DUMMIES,

4th Edition

M02314
\$22.99

Everything you need to 'bee' a successful backyard beekeeper

If you've ever thought about becoming a backyard beekeeper—or have already tried a hand at it and want to be a better one—then this is the book for you! In Beekeeping for Dummies, 4th Edition, you'll find everything you need to know in order to start your own colony, including how to assemble and maintain beehives, handle every phase of honey production, purchase and use all the latest tools, and what to do beyond your first season. Softcover, 480 pages. Ship wt. 1 lb.

Honey Bee Diseases and Pests

3rd Edition

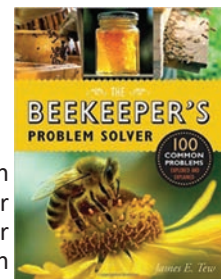

M000131
\$17.95

This publication was prepared by the Canadian Association of Professional Apiculturists to assist beekeepers in preventing serious disease-related damage to their hives. Excellent color photos. Perfect for the hobbyist and a good addition for the experienced beekeeper. Softcover. 68 pages. Ship wt. 1 lb.

The Beekeeper's Problem Solver

M02310
\$19.99

Author James Tew writes about 100 common problems that beekeepers might encounter while working their bees or extracting their honey. Dr. Tew answers these questions in clear and simple terms. From hive management to diseases and from equipment to honey production, each key area is tackled in depth, with photographs, practical tips, and useful insights. Softcover, 223 pages. Ship wt. 2 lbs.

Natural Beekeeping by Ross Conrad

M00049
\$35.00

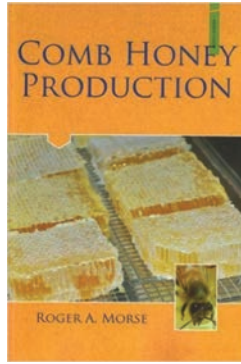

Author Ross Conrad has been hailed by many beekeepers for his "organic approaches to modern apiculture." Ross believes that many beekeeper disease and pest problems can be solved without using harmful chemicals. With news that some chemical honey bee disease and pest treatments are no longer working, Ross says, "It's time for a new approach. *Natural Beekeeping* offers a holistic, sensible alternative to conventional chemical practices by proposing a program of natural hive management." Softcover, 240 pages. Ship wt. 2 lbs.

Restocking fee of 35% for all pre-approved book returns

Comb Honey Production

M02313
\$26.00

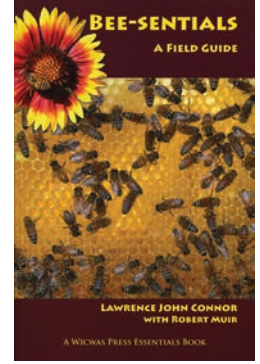

Wicwas Press has reprinted Dr. Roger Morse's classic book on the specialized art of comb honey production. No other beekeeping product on the market is more natural or more delicious than comb honey. Even though comb honey production might eliminate your need for some costly honey house equipment such as extractors and bottlers, this specialized form of honey production requires a few changes in your bee management in order to maximize your comb honey yield, while not sacrificing any quality. Softcover, 128 pages. Ship wt. 2 lbs.

Bee-sentials — A Field Guide

M00077
\$25.00

A beekeeping book you have been looking for—a basic book with some 'meat on its bones' for continued study by new and not-so-new beekeepers. This is a book that can be thrown into a computer bag or backpack and read on an airplane or beside a lake in the woods. 25 Colorful pages of honey plants. Softcover, 208 pages. Ship wt. 1 lb.

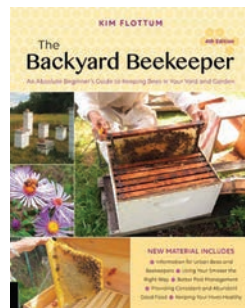

The Backyard Beekeeper 4th Edition

NEW!

M019804
\$24.99

**An Absolute Beginner's Guide
to Keeping Bees in Your
Yard and Garden**

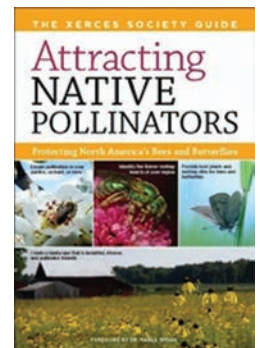

Now in its 4th edition, makes the time-honored and complex tradition of beekeeping an enjoyable and accessible backyard pastime that will appeal to urban and rural beekeepers of all skill levels. What's New? - Information for Urban Bees and Beekeepers - Using Your Smoker the Right Way - Better Pest Management - Providing Consistent and Abundant Good Food - Keeping Your Hives Healthy With this complete resource and the expert advice of Bee Culture editor Kim Flottum, your bees will be healthy, happy, and more productive. Paperback – 240 pages. Ship wt. 2 lbs.

Attracting Native Pollinators

M00111
\$29.95

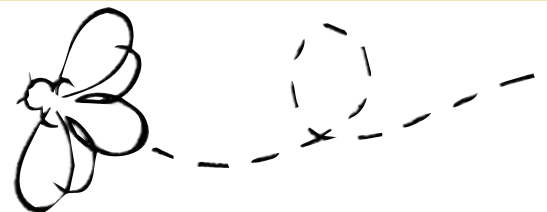

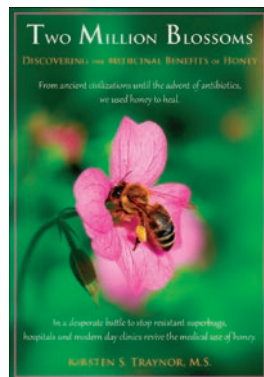

Bees, wasps, butterflies, moths, flies and some beetles pollinate more than 70 percent of flowering plants, but North America's native pollinators face multiple threats to their health and habitat. The Xerces Society offers a complete action plan for protecting these industrious animals by providing flowering habitat and nesting sites. Softcover, 371 pages. Ship wt. 3 lbs.

Two Million Blossoms — Discovering the Medicinal Benefits of Honey

M00120
\$19.95

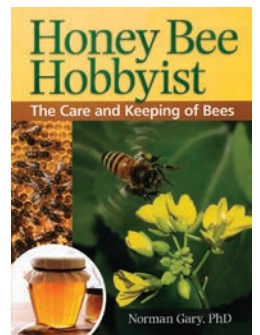

Author Kirsten Traynor has carefully researched and interviewed many experts for this well written and informative book that chronicles the medicinal use of honey "from ancient civilizations until the advent of antibiotics." "New scientific findings from around the world demonstrate honey heals chronic wounds, beats antibiotic-resistant superbugs, eliminates tissue scarring, reduces brain damage, improves memory and minimizes the harmful side-effects of cancer treatments. An easily assimilated antioxidant, honey proves more effective than over-the-counter cough medicines, acts as a natural laxative, stimulates good intestinal flora, and alleviates spring allergies." Softcover, 258 pages. Ship wt. 2 lbs.

Honey Bee Hobbyist

M00008
\$16.95

This is a wonderful beginner's beekeeping book from Dr. Norm Gary, beekeeper, research entomologist, bee behavior expert and musician! A bee specialist for over a half a century, Dr. Gary not only has taught actors how to perform with thousands of bees, but also has taught thousands of students the biology of bees. In this book Dr. Gary counsels the beginning beekeeper on all things honey-bee related, from observing your first hive to harvesting your own honey. Dr. Gary's passion for bees is palpable in this practical, easy-to-follow guide to beekeeping as a hobby. Softcover, 175 pages. Ship wt. 1 lb.

Restocking fee of 35% for all pre-approved book returns

1-888-922-1293

Queen Rearing and Bee Breeding

M02312
\$50.00

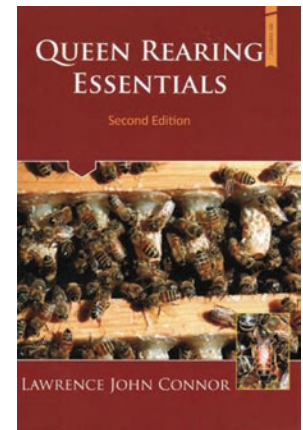

World famous Professor Harry H. Laidlaw and his former student, Dr. Robert E. Page, Jr., worked together to write this excellent specialized book on queen rearing and bee breeding. Topics discussed run the gamut from the nuts and bolts of commercial queen rearing to more individualized queen rearing for the smaller queen producer. Queen biology and genetics are discussed, as well as more specialized topics such as instrumental insemination of queen bees. Softcover, 224 pages. Ship wt. 2 lbs.

Queen Rearing Essentials 2nd Edition

M019642
\$23.00

Author Larry Connor has revised and updated his original version of this very practical book on rearing queen bees. The many beautiful color photos are immensely helpful. "This book is one-stop shopping for all you need to know to raise your own queens. A terrific update with all the latest information by the premier teacher of how to raise queens. Highly recommended!"—Dan O'Hanlon, President, West Virginia Queen Producers. Softcover, 160 pages. Ship wt. 1 lb.

Scientific Queen-Rearing

M00097
\$20.00

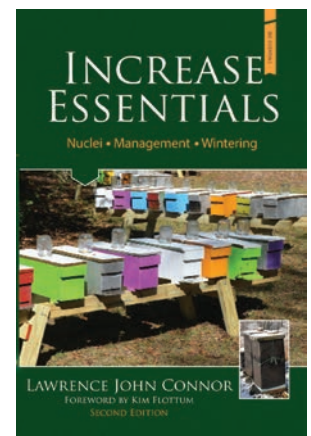

G.M. Doolittle first published this classic book on queen rearing in 1889. Mr. Doolittle spent over two decades researching and testing the ideas he outlined in his book. Now considered essential to the development of the modern queen rearing industry, the book describes how beekeepers are able to use the instincts of the hive to produce quality queens. Reprinted by Dr. Larry Connor's Wicwas Press. 101 pages, Softcover. Ship wt. 1 lb.

Increase Essentials - 2nd Edition

M00023
\$25.00

Author Dr. Lawrence Connor continues his Bee Essentials series with this excellent guide on how beekeepers can use nuclei to solve problems in the beeyards and use them to winter colonies and provide a reliable source of fresh bees, locally acclimatized queens, replacement hives and colonies for operational growth or sale. Second edition, softcover, 176 pages. Ship wt. 1 lb.

Honey—Nature's Golden Healer

M00032
\$19.95

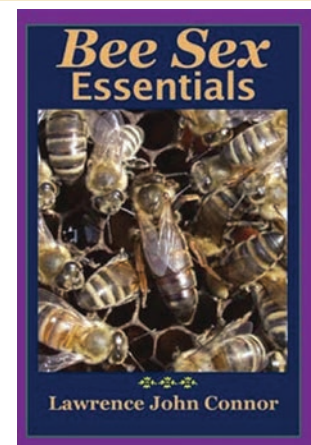

Author Gloria Havenhand believes that honey bees, the origin of many pharmaceutical drugs, have been forsaken and forgotten—to our cost. She now manages a number of honey bee colonies and runs Medibee, a bee product company. With an increasing number of people interested in ditching drugs for natural alternatives to combat health problems from allergies to acne, this book is a timely look at how the beehive can help us look and feel better. Beautiful color photography. Softcover, 160 pages. Ship wt. 1 lb.

Bee Sex Essentials

M00112
\$25.00

Bee Culture/American Bee Journal writer Dr. Larry Connor reviews the latest and essential knowledge of drone and queen production, mating and genetics. He clearly and concisely shows how the sex life of bees directly impacts the fate of the colony and, in turn, the success of the beekeeper. He outlines a sample bee-breeding program for a sideline beekeeper with fewer than 100 colonies who wants to produce queens from survivor, locally-adapted and mite-resistant lines. Softcover, 152 pages. Ship wt. 1 lb.

Honey from the Earth

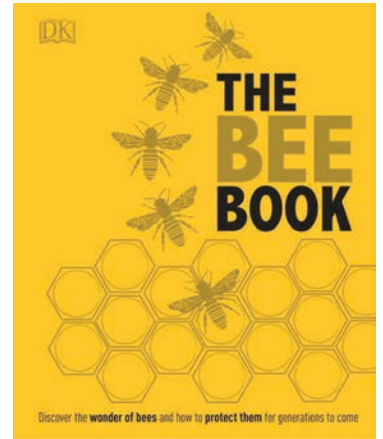

M01735
\$64.95

The internationally acclaimed honey-bee photographer Eric Tourneret spent fifteen years traveling the world to capture the breathtaking diversity of bees and beekeeping traditions on six continents. This is by far the most stunning collection of bee photography ever produced, complete with insightful commentary from a dozen of leading bee experts, including Dr. Tom Seeley, Dr. Jurgen Tautz, and Kirk Webster.

The Bee Book

M00422
\$25.00

Bees are vital to the future of the planet, yet they are under threat and in decline. The Bee Book offers remarkable insights into their world and shows how we can support and enjoy them in our daily lives. Chapters include: An Amazing World of Bees; Attracting Bees; Caring for Bees; and Enjoying Bee Bounty. Many beautiful color photos and a very helpful section on incorporating honey and bee products in recipes, crafts, and home remedies. Hardcover, 221 pages. Ship wt. 2 lbs.

Bees — An Up-close Look at Pollinators Around the World

M00424
\$25.00

Beekeepers are familiar with honey bees, but many of them do not realize that there are over 20,000 different species of bees and they play an important role in our ecology of the planet. They pollinate plants of all types and keep our natural world intact. The authors present more than 100 of the most eye-catching bees from around the world as you've never seen them—up-close and with stunning detail. Hardcover, 160 pages. Ship wt. 1 lb.

Bee — Close-up Photography of the Bee

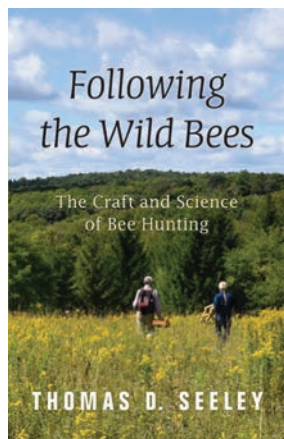

M00423
\$22.99

Photographer Rose-Lynn Fisher has compiled a wonderful portfolio of honey bee anatomy photographs that are truly amazing! These close-up photos and precise descriptions take the reader on a fantastic tour of the honey bee's anatomy that most of us have never imagined to exist. This is an important book for beekeepers in order for them to truly understand the marvelous creature they have come to know through their craft. Softcover, 128 pages. Ship wt. 1 lb.

Following the Wild Bees — The Craft and Science of Bee Hunting

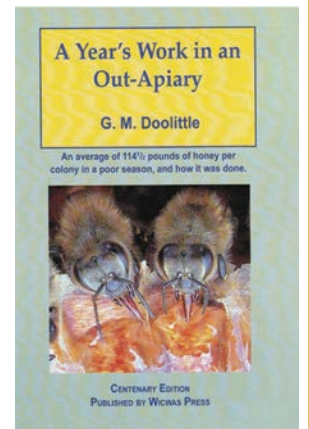

M00427
\$22.95

Thomas D. Seeley, world famous bee behavior scientist, has written a delightful book on the lost art of bee hunting. Dr. Seeley vividly describes the history and science behind this lost pastime and how anyone can do it. The book is both a unique meditation on the pleasures of the natural world and a guide to the ingenious methods that compose the craft of the bee hunter. Hardcover, 164 pages. Ship wt. 1 lb.

A Year's Work in an Out-Apiary

M00426
\$20.00

One hundred years ago G.M. Doolittle developed honey production methods that eliminated swarming. This Centenary Edition includes all his original work plus added materials: A table of contents, an index, the 1897 interview written by E. R. Root, and study questions. Softcover, 114 pages. DVD's

Natural Beekeeping by Ross Conrad - (DVD)

M00049DVD
\$29.95

This DVD is a comprehensive survey of natural beekeeping, its principles and practices, aimed at both hobby and small-scale commercial apiculturists. In this filmed workshop, noted Vermont beekeeper Ross Conrad flips the script on traditional approaches by proposing a program of selective breeding and natural hive management. The video presents a comprehensive survey of natural beekeeping methods and challenges, including segments filmed in the field. It offers practical information that every aspiring beekeeper needs to know—everything from basic hive equipment to working with your bees to harvesting and processing honey. *Video time:* 193 minutes. Ship wt. 4 ozs.

Natural Beekeeping - (DVD) *Organic, Non-Disruptive Apiarian Methods* by Jerry Dunbar

M01720
\$29.95

“Organic, Non-Disruptive Apiarian Methods” For more than 40 years Jerry Dunbar has been developing ways of working with honey bees in a manner that creates the least possible interference and encourages their health and future survival. *Video time:* 87 minutes. Ship wt. 4 ozs.

Swarm plus - (DVD) *An Incredible, Up-Close Look at the Amazing Honeybee*

M00096
\$24.00

This expertly done instructional DVD teaches the beekeeper about honey bee swarming and includes: Nine swarms, Feral colony, After the catch, Bee removal, Equipment, plus a Bonus video. The narrator demonstrates how to catch a variety of swarms in many different circumstances. A fun, instructional, and entertaining video. *Video time:* 58 minutes. Ship wt. 4 ozs.

More Than Honey - (DVD)

M00107
\$29.95

This informative DVD by Academy Award-nominated director Markus Imhoof tackles the vexing issue of why bees, worldwide, are diminishing in numbers. With the tenacity of a man out to solve a great mystery, he investigates this global phenomenon, from California to Switzerland, China and Australia. “Exquisite macro-photography of bees in flight and in their hives reveals a fascinating, complex world in crisis.” *Video time:* 91 minutes. Ship wt. 3 ozs.

SOAP MAKING

M04067

Honey Glycerine Melt & Pour Soap

Anyone can become a soap crafter with this 10% honey glycerine soap. Just melt, add fragrance and color and mold. What a great and simple way to extend your product line, please your customers and friends and promote one of the many uses of honey! Comes in a wrapped 5 lb. bar. Ship wt. 6 lbs.

M04067 \$29.95

M04060

Soap Making Lye

Lye is getting more difficult to find. This high test lye is ideal for soap making. It comes in a 2 lb. can.

For pick-up only.

⊗ M04060 \$11.95

M04061GL M04061QT

Coconut and Palm-Base Oils

Most recipes call for Palm or Coconut oils. Coconut oil makes a hard bar of soap with a fluffy, creamy lather. Palm oil makes hard long lasting soap with small creamy bubbles.

- M04061GL Coconut Oil - Gallon
Ship wt. 8 lbs. \$32.95
- M04061QT Coconut Oil - Quart
Ship wt. 3lbs. \$8.95
- M04062GL Palm Oil - Gallon
Ship wt. 8 lbs. \$27.95
- M04062QT Palm Oil - Quart
Ship wt. 3 lbs. \$7.95

M040651

Refined Shea Butter

Shea butter helps soften and protect skin from drying and aging. It is a great addition to lotions, balms, salves & soap. Ship wt. 1 lb.

M040651 \$12.95

M04064QT

Olive Oil

Olive oil has been used for dry and aging skin for thousands of years. The lather is thick but this is easily remedied by mixing with other oils.

M04064QT Olive Oil - Quart
Ship wt. 3 lbs. \$11.95

M040661

Cocoa Butter

Cocoa butter has a slight chocolate scent. Can be used as a moisturizer. Ship wt. 1 lb.

M040661 \$15.95

M04063GL

M04063QT

Sweet Almond Oil

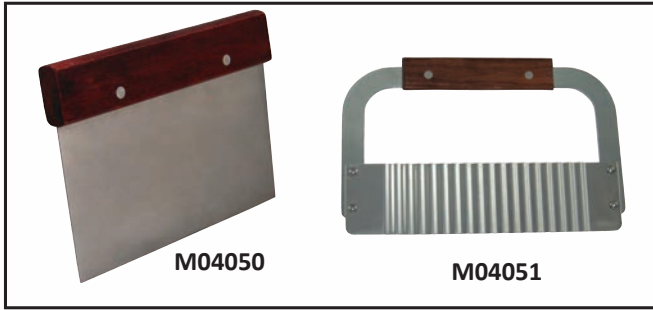

Almond oil is used as a main ingredient in massage oils, lotions, salves and balms. In soap it is used in smaller quantities to produce a mild soap with a good lather.

- M04063GL Sweet Almond Oil Gallon
Ship wt. 8 lbs. \$47.00
- M04063QT Quart
Ship wt. 3 lbs. \$12.95

M04062QT M04062GL

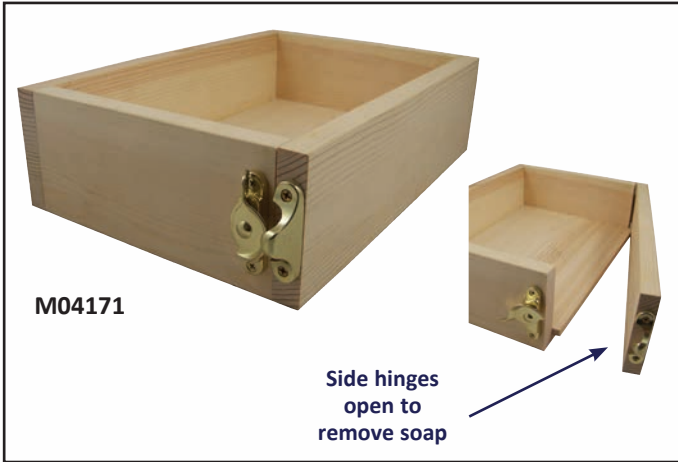

SOAP MAKING

Soap Cutters

These soap cutters make a simple task of cutting soap into bars.

- M04050** Straight Cutter
Ship wt. 9 ozs. **\$10.50**
- M04051** Krinkle Cutter
Ship wt. 7 ozs. **\$10.50**

Wooden Soap Mold

One of the easiest ways to make soap is to use a loaf mold. This wooden mold will produce a loaf that is 3" H x 8" W x 12" L. Simply line the inside of the mold with wax paper or plastic wrap taking care to minimize creases and folds to avoid "blemishes" in the soap. Once the soap has set for 24 hours, unlatch the mold to remove the soap and then let the soap cure for another 24 hours before cutting.

- M04171** Wooden Soap Mold
Ship wt. 8 lbs. **\$25.00**

Liquid Fragrances for Soap

These highly concentrated liquid scents should be added to the soap base before pouring.

Liquid scents 1 oz. bottle
Ship wt. 3 ozs. **\$6.40**

- M0193017** Lavender
- M0193018** Rose
- M0193019** Vanilla
- M0193020** Cucumber Melon

Bee and Blossoms Mold

The Bee and Blossom soap mold is a 3 cavity mold. A 3 oz. mold of a worker bee surrounded by many blossoms make this mold very attractive.

- M04155** Bee & Blossoms Mold
Ship wt. 3 ozs. **\$9.95**

Flying Bee Mold

The Flying Bee soap mold is a 4 cavity mold. Weighing in at 2.5 oz. this is sure to be a favorite at your local market and sales stand.

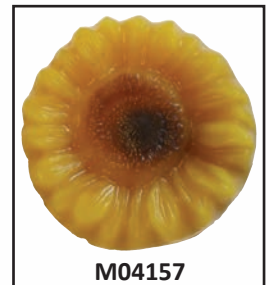

- M04156** Flying Bee Mold
Ship wt. 3 ozs. **\$9.95**

Sunflower Mold

The Sunflower soap mold is a 4 cavity mold. This mold will produce a bar approximately 4 oz. in weight.

- M04157** Sunflower Mold
Ship wt. 3 ozs. **\$9.95**

Soap Colorant

These are non-toxic liquid soap colorants. A little bit goes a long way.

Soap Colorant 1 oz. bottle
Ship wt. 3 ozs. **\$7.10**

- M03170** Green
- M03171** Blue
- M03172** Yellow
- M03173** Red

SOAP MAKING

COMPANY POLICY

FREE SHIPPING

Free Shipping applies to most orders placed from this catalog and our online store for orders over \$100 prior to tax and other handling charges. Items will be sent regular ground by the carrier of our choice within the lower 48 states. Items marked with the symbol  are excluded from the free shipping offer. The items included/excluded from free shipping are subject to change without notice. Due to rising cost for shipping, backorders are shipped and billed separately from your original order. Customers will be responsible for the additional shipping charges on all back orders. If you wish to have your order held for the back ordered item please put that in the notes section online or advise the customer service rep when phoning in an order. AK and HI are excluded.

SHIPPING RATES

Customer pays all freight cost unless otherwise stated or agreed upon. Large orders over 200 lbs will be reviewed to determine if the order will go regular ground or by freight. If we determine the order is too large to go by ground, we will compare different freight lines to get the best possible rate for you. Next day, 2-day, & 3-day shipments will be available at an expedited rates. Freight is F.O.B Shipping point meaning customer take full responsibility upon leaving Dadant & Sons Shipping Point.

ADDITIONAL CHARGES

Rural Area: \$2.75 - Extended Residential: \$3.50 - Address Corrections: \$14.00

Delivery Acknowledgement: \$3.00 - Call Tag Required: \$9.00 - Handling Fee per shipment: \$2.00

Shipping rates may increase at any time due to rising shipping cost and surcharges

EXPORT ORDERS

Orders for export may include shipping, special packaging and documentation fees at the customer's expense. We accept Visa, MasterCard, Discover, American Express & checks drawn from a US Bank in US currency. For large container orders, we accept a bank wire transfer to our bank account or a letter of credit. All bank wire transfer cost and exchange rates are the responsibility of the customer.

PAYMENT METHODS

We accept Visa, MasterCard, Discover, American Express, check drawn on US bank account, wire transfer, money order & cash.

OVERPAYMENTS

May be refunded or credited to customers account.

RETURNED CHECK:

All returned checks will have a \$25.00 service fee

PICKUP ORDERS

All pickup orders can be picked up at the local branch where the order was placed at. Pickup times can vary by branch. In most cases, if you contact your local branch ahead of time, we will have your order ready for pickup when you arrive.

BACKORDERS

Backorders are shipped & billed separately from original order. Customers will be responsible for the additional charges on all back orders. Back orders can be dropped from original order at customer's request.

SPECIAL ORDERS

A 50% deposit must accompany all special orders. Some special orders may be subject to a cancellation charge. Remaining balance due prior to shipping.

WARRANTY

Dadant & Sons warrants its equipment to be free of defects in material and workmanship. If within 30 days of purchase you feel an item to be defective, please call for return authorization # and shipment instructions for the return. We will refund your purchase price along with all transportation charges. This warranty does not cover any damage to equipment arising from alteration, abuse, or use of

product for other than its intended purpose. We reject all implied and expressed warranties.

LIABILITY

Because conditions of use are beyond our control, we make no warranty or representation, express or implied, except that all products conform to the description provided by the manufacturer on sales literature or product labels. Our liability is limited to the purchase price paid. Glass containers ship at your own risk.

PRODUCT SUITABILITY

Many States & localities have codes and regulations governing sales, construction, installation, and or use of products for certain purposes. While we attempt to assure that our products comply with such codes, we cannot guarantee compliance in every situation. We cannot be responsible for how the product is installed or used. Before you purchase and use a product, please review both the product application and local codes and regulations. Be sure that the product, its installation, and its use will comply with them.

DAMAGED FREIGHT

All merchandise is shipped "F.O.B. Shipping Point". All products become your responsibility as soon as it leaves Dadant & Sons Inc. The freight carrier is responsible for complete and safe delivery of your merchandise. Inspect the packaging and merchandise upon arrival. If the freight carrier fails to deliver your merchandise in good condition, it is your responsibility to note this to the driver upon delivery. Also contact us immediately so we can make a claim with the carrier on your behalf.

ORDER DISCREPANCIES

Check all orders immediately upon receipt and contact us within 7 business days on any discrepancies/damage or we cannot be responsible for errors.

RETURNED MERCHANDISE

If you want to return an item, please call 1-888-922-1293 or contact the local branch where the item was purchased from. 1) Item must be in original carton and in good condition, 2) Returned within 30 days of receipt. 3) Must be returned to location of original purchase. 4) Original receipt required. 5) Charges will be applied to the unit reshipped to you with credit applied back to your method of payment upon receipt of original item.

LIMITATIONS

1) In most cases a 15% restocking fee will be charged. 2) To insure purity, we cannot exchange or offer refunds on beeswax or beeswax foundation. 3) We cannot accept returns on medications, containers, or bee feeds. 4) Restocking fee of 35% for all pre-approved book returns. Exception: If we made an error, we will give a full refund and pay the freight both ways.

STATE SALES TAX

We are required to collect sales tax where applicable by law. We charge sales tax in the following states.

CA, FL, IA, IL, KY, MI, MO, NY, TX, VA, & WI

HOLIDAY CLOSING

In addition to recognized national holidays, we will be closed the day after Thanksgiving,

CLOSING FOR INVENTORY

We will be closed on September 3 & 4, 2019 for our annual inventory.

CATALOG ERRORS

We are not responsible for typographical or photographic errors that may appear in any Dadant material. We reserve the right to make adjustments or corrections due to changing market conditions, product discontinuations, or typographical or photographic errors in products

Hours:

Contact your local Dadant Branch for hours of operation. Each branch may vary.

Figuring Shipping and Handling Charges for Ground Shipping

- 1) Add the shipping weights from each item ordered.
- 2) After adding, all fractions of a pound must be rounded up to the next full pound.
- 3) If the total weight exceeds 35 lbs., use following example to calculate rates. **For example:** If total weight is 55 lbs., find the rate for 35 lbs., then find rate for the remaining 20 lbs. add both package rates together for total rate.
- 4) Estimate the straight line distance from shipping point to delivery point.
- 5) Use the chart below to determine shipping charges by locating the dollar amount where the shipping weight line and shipping distance column intersect.

We ship by national and regional carriers. If you provide a valid email address, we will send tracking information for your order if the carrier provides this service. Depending on the carrier, shipments may not be able to be traced until 30 days after shipment has been made, which may be unfeasible due to the seasonal nature of our business. We will be happy to provide a quote with any alternate carriers available to us if you request it with your order.

Note: This chart includes the residential and extended delivery area surcharge by the national carriers. If these charges do not apply to your delivery address, the actual shipping charge will be less than the chart amount. These shipping charges may not be sufficient for lightweight bulky merchandise or weights over 35 pounds which will be shipped in multiple packages. We reserve the right to bill you for additional shipping charges. We reserve the right to ship it from a different branch to complete your order in a timely manner.

** Dimensional weight may be used rather than actual weight. Dimensional weight is a formula used by package delivery companies to determine a billing weight based on density. Some items may show the billing weight rather than the actual weight.*

Dimensional rates are calculated on **every shipment.**

To Place Your Order

For maximum savings on freight, refer to the map on the back cover and select the Dadant branch closest to you.

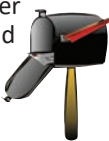

By Phone: Dial the Toll Free Order Number for the Dadant Branch nearest you for better customer service when placing your order. *(For faster service, please have your order written down and your credit card number ready. Also, please know your Dadant Customer Number (located above your address label on the back cover) to speed up the order process.*

By Fax: Make out your order with item numbers and quantity and fax the completed order to your nearest Dadant branch.

By Mail: Make out your order with item numbers and quantity and mail the completed order to your nearest Dadant branch.

By Internet: Check out our website: www.dadant.com. Online ordering available at www.dadant.com/catalog.

Estimated Parcel Rate Chart for Shipping and Handling for Continental U.S.

**Actual charges may be different.*

We Ship By:

1) National/regional carrier and Truck Freight. Special priority shipping options available at higher costs.

Please be sure to provide the correct shipping address with your order. Charges for incorrect addresses will be forwarded to your bill. Additional charges for rural delivery will be added to your invoice.

WE CANNOT SHIP TO P.O. BOXES. PLEASE PROVIDE A PHYSICAL ADDRESS TO SHIP TO.

Check website or call for truck freight quotes.

We reserve the right to change shipping carriers if we are able to find a more economical method of shipping that will provide the service you are accustomed to, at a lower shipping rate.

Dadant & Sons, Inc., warrants its equipment to be free of defects in material and workmanship. If within 30 days of purchase you feel an item to be defective, please return the merchandise along with your sales slip at once, and we will refund the purchase price along with all transportation charges. This warranty does not cover any damage to equipment arising from alteration, abuse, or use of product for other than its intended purpose. We reject all implied and expressed warranties.
